DIN EN ISO 24817:2025-10 (E)

Erscheinungsdatum: 2025-08-29

Petroleum, petrochemical and natural gas industries - Composite repairs for pipework - Qualification and design, installation, testing and integrity management (ISO/DIS 24817:2025); English version prEN ISO 24817:2025

Contents

Page

Foreword ..... **vi**

Introduction ..... **vii**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **2**

4 Symbols and abbreviated terms **7**
4.1 Units 7
4.2 Symbols 7
4.3 Abbreviated terms 11

5 Applications **11**

6 Summary of key issues **13**
6.1 Repair system qualification 14
6.2 Enquiry stage 14
6.3 Design of repair 14
6.3.1 Type A and Type B design cases 14
6.4 Installer training 17
6.5 Installation of repair 17
6.6 Ongoing integrity management of the repaired system 17

7 Qualification **17**
7.1 Repair system qualification data 17
7.2 Re-qualification of the repair system 19
7.2.1 Overview 19
7.2.2 For Type A defect repairs 19
7.2.3 For Type B defect repairs 19

8 Repair feasibility assessment **19**
8.1 Repair class 21
8.2 Required data 21
8.2.1 Background 21
8.2.2 Original equipment design data 21
8.2.3 Maintenance and operational histories 22
8.2.4 Service condition data 22

9 Design methodology **22**
9.1 Repair design lifetime and initial service life 22
9.2 Environmental compatibility 23
9.3 Design temperature effects 23
9.4 Cyclic loading 25
9.5 Determination of design strains 25
9.5.1 Design strains based on default allowable strains 25
9.5.2 Design strains based on performance testing 26
9.6 Determination of equivalent load and equivalent pressure 26
9.7 Design of repairs for Type A defects 27
9.7.1 Substrate load sharing, limited by substrate allowable stress 27
9.7.2 Substrate load sharing, limited by repair laminate design strain 27
9.7.3 Repair laminate carries all loads 28
9.8 Design of repairs for Type B defects 28

9.8.1 Determination of service factor, f_{leak} 29
9.8.2 Circular or near-circular defects 29
9.8.3 Slot-type defects in the circumferential direction 30
9.8.4 Slot-type defects in the axial direction 30
9.9 External loads 30
9.10 Other defects (with assessments based on substrate stress) 31
9.11 Repair of other components 31
9.12 Axial extent of repair 32
9.12.1 Patches 33
9.13 Calculation of the repair design thickness, t_{design} 34
9.14 Confirmation that repair design thickness is within acceptable limits 34
9.14.1 Maximum acceptable value of t_{calc} 34
9.14.2 Maximum allowable design pressure for tees or nozzles 34
9.14.3 Potential for repair debonding 34
9.15 Calculation of total repair length 35
9.16 Design output 36
9.17 Optional design considerations 36
9.17.1 Fire performance 36
9.17.2 Cathodic disbondment 36
9.17.3 Electrical conductivity 37
9.17.4 Fretting type defects 37
9.17.5 Delamination or blister type defects 37
9.17.6 Clamps and other repair systems 37

10 Installation 37
10.1 Storage conditions 37
10.2 Documentation prior to repair application 38
10.2.1 Method statement 38
10.2.2 Work pack 38
10.3 Installer and supervisor qualifications 40
10.4 Installation procedure 40
10.5 Repair completion documentation 40
10.6 Live repairs 42
10.7 Repair of clamps, piping components, tanks, or vessels 42
10.8 Environmental considerations 42
10.9 Repair of defects within the repair system 42

11 Ongoing integrity management 43
11.1 General 43
11.2 Record keeping 43
11.3 In-service inspection 43
11.4 Allowable defects for the repair system 45
11.5 Repair system maintenance and remedial options 47
11.5.1 Overview 47
11.5.2 Substrate adjacent to the repair 48
11.5.3 Repairs to Type A defects 48
11.5.4 Repairs to Type B defects 48
11.5.5 Repair system 48
11.6 Repair lifetime considerations 49
11.6.1 Periodic review 49
11.6.2 Lifetime reduction 50
11.6.3 Lifetime extension 50
11.7 Future modifications 50

12 System testing 50

13 Decommissioning 51

Annex A (normative) **Design data sheet 52**

Annex B (normative) **Qualification data 55**

Annex C (normative) **Short-term pipe spool survival test 60**

Annex D (normative) **Measurement of γ_{LCL} for through-wall defect calculation 62**

Annex E (normative) **Measurement of performance test data 67**

Annex F (normative) **Measurement of impact performance 69**

Annex G (normative) **Measurement of the degradation factor** **70**

Annex H (normative) **Qualification of repair systems for other defects (with assessments based on substrate stress)** **72**

Annex I (Informative) **Guidance on the selection of the appropriate defect size and geometry for through-wall defects (Type B defect)** **75**

Annex J (normative) **Installer qualification** **84**

Annex K (informative) **Installation requirements and guidance** **87**

Annex L (informative) **Design considerations** **89**

Annex M (informative) **Management of the integrity of composite repair systems to pipework and vessels** **96**

Bibliography **99**
