DIN EN ISO 21857:2022-08 (E)

Petroleum, petrochemical and natural gas industries - Prevention of corrosion on pipeline systems influenced by stray currents (ISO 21857:2021)

Contents

Page

European foreword ... **4**

Foreword ... **5**

Introduction ... **6**

1 Scope ... **7**

2 Normative references ... **7**

3 Terms and definitions ... **8**

4 Abbreviations and symbols ... **9**
4.1 Abbreviations ... 9
4.2 Symbols ... 10

5 Information exchange and co-operation ... **11**

6 Common sources of interference that can affect corrosion ... **12**
6.1 General ... 12
6.2 Direct current ... 13
6.2.1 General ... 13
6.2.2 Traction systems ... 13
6.2.3 Industrial systems ... 13
6.3 Alternating current ... 13
6.3.1 General ... 13
6.3.2 Overhead and buried power lines ... 14
6.4 High-voltage direct current transmission systems ... 14
6.5 Natural interference ... 14
6.5.1 General ... 14
6.5.2 Geomagnetic (telluric) interference ... 14
6.5.3 Tidal interference effects ... 15

7 Identification and measurement of stray current interference ... **15**
7.1 Principle ... 15
7.2 Stray Current interference ... 16
7.2.1 Inductive and conductive coupling from remote sources ... 16
7.2.2 Conductive coupling from nearby sources ... 16
7.3 Measurement of electrical parameters ... 16
7.3.1 Data acquisition systems ... 16
7.3.2 Possible errors in AC measurements ... 17
7.3.3 Potential measurement ... 17
7.3.4 Current measurement on probes ... 17
7.3.5 IR-free potential measurement on coupons or probes ... 17
7.3.6 Duration of the measurement ... 17
7.3.7 Specific requirements for coupons or probes ... 18
7.4 Corrosion rate measurement ... 18

8 Acceptance criteria for DC interference ... **18**
8.1 Overview of criteria ... 18
8.2 Corrosion rate ... 19

8.3 Criteria for steel and cast iron ... 20
8.3.1 Time constant interference ... 20
8.3.2 Time variant interference ... 21
8.4 Criteria for steel pipes in concrete based on potential measurements without cathodic protection ... 22
8.4.1 Time constant anodic interference ... 22
8.4.2 Time variant interference ... 22

9 Reduction of DC stray current interference ... 22
9.1 General ... 22
9.2 Modifications to the source of interference ... 23
9.2.1 Principles ... 23
9.2.2 Direct current systems at industrial sites ... 23
9.2.3 Direct current systems at ports ... 23
9.2.4 Direct current traction systems ... 23
9.2.5 Cathodic protection systems ... 24
9.2.6 Telluric interference ... 25
9.2.7 Direct current communication systems ... 25

10 Modifications to the interfered structure ... 25
10.1 General ... 25
10.2 Design prerequisites ... 26
10.2.1 Coatings ... 26
10.2.2 Isolation from other structures ... 26
10.2.3 Distance to be maximized ... 26
10.2.4 Installation of mitigation devices ... 26
10.2.5 Modifying the electrical continuity of the interfered structure ... 27

11 Inspection and maintenance ... 28

Annex A (informative) **Use of current probes to evaluate fluctuating stray current interference on cathodically protected structures ... 29**

Annex B (informative) **Determining the relevant position for placing reference electrodes, coupons and probes in case of any conductive coupling caused by stray currents ... 32**

Annex C (informative) **Operating principles of electrical resistance probes ... 39**

Annex D (informative) **Geomagnetic interference ... 40**

Annex E (informative) **High voltage direct current interference ... 49**

Annex F (informative) **Alternating Current Interference ... 51**

Annex G (informative) **Tidal Effects ... 56**

Annex H (informative) **Photovoltaic interference ... 57**

Annex I (informative) **Modelling the effects of stray current interference on cathodically protected pipelines ... 60**

Annex J (informative) **Assessment of the corrosion risk for steel in concrete or for cathodically protected structures under time variant interference conditions ... 64**

Annex K (informative) **Principles of anodic and cathodic interference ... 69**

Bibliography ... 72
