|--------------------|---|-------------|
| Foreword .....     |   | iv          |
| Introduction ..... |   | v           |
| 1                  | Scope .....   | 1           |
| 2                  | Normative references .....                              | 1           |
| 3                  | Terms related to general concepts .....                 | 1           |
| 4                  | Terms related to materials and equipment .....          | 3           |
| 4.1                | Pipe materials .....                                    | 3           |
| 4.2                | Equipment .....   | 5           |
| 5                  | Terms related to design, construction and testing ..... | 9           |
| 5.1                | Design of pipeline system .....                         | 9           |
| 5.2                | Pipeline installation .....                             | 12          |
| 5.3                | Welding and Non-destructive testing .....               | 14          |
| 5.4                | Pre-commissioning and commissioning .....               | 17          |
| 6                  | Terms related to operation and maintenance .....        | 18          |
| 6.1                | Operation of pipeline and station .....                 | 18          |
| 6.2                | Pipeline maintenance .....                              | 20          |
| 6.3                | Repair and emergency response .....                     | 24          |
| 6.4                | Life extension and abandonment .....                    | 25          |
| 7                  | Terms related to corrosion control .....                | 26          |
| 7.1                | General .....   | 26          |
| 7.2                | Coating .....   | 27          |
| 7.3                | Cathodic protection .....                               | 29          |
| 7.4                | Stray current .....                                     | 32          |
| Bibliography ..... |   | 34          |
