Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Sampling and conditioning 6
4.1 Sampling 6
4.2 Conditioning 6
4.3 Prerequisites on the testing procedure 6

5 Test methods for whole footwear 9
5.1 Specific ergonomic features 9
5.2 Determination of upper/outsole and sole interlayer bond strength 10
5.3 Determination of internal toecap length 15
5.4 Determination of impact resistance 16
5.5 Determination of compression resistance 19
5.6 Behaviour of toecaps and inserts (thermal and chemical) 21
5.7 Determination of leakproofness 22
5.8 Determination of the dimensional conformity of inserts and the penetration resistance of the sole 22
5.9 Determination of the flex resistance of penetration-resistant inserts 26
5.10 Determination of electrical resistance 26
5.11 Determination of footwear slip resistance 27
5.12 Determination of insulation against heat 30
5.13 Determination of insulation against cold 32
5.14 Determination of energy absorption of the seat region 33
5.15 Determination of resistance to water for whole footwear 35
5.16 Determination of impact resistance of a metatarsal protective device 40
5.17 Determination of the shock absorption capacity of ankle protection materials incorporated into the upper 44

6 Test methods for upper, lining and tongue 46
6.1 Determination of thickness of upper 46
6.2 Measurement of the height of the upper 46
6.3 Determination of tear strength of the upper, lining and/or tongue 47
6.4 Determination of the tensile properties of the upper material 47
6.5 Determination of upper flexing resistance 48
6.6 Determination of water vapour permeability (WVP) 51
6.7 Determination of water vapour absorption (WVA) 55
6.8 Determination of water vapour coefficient 58
6.9 Determination of pH value 58
6.10 Determination of resistance to hydrolysis of upper 58
6.11 Determination of chromium VI content 58
6.12 Determination of abrasion resistance of lining and insock 58
6.13 Determination of water penetration and water absorption for upper 61
6.14 Determination of resistance of upper to cutting 63

7 Test methods for insole and insock 63
7.1 Determination of insole thickness 63

7.2 Determination of water absorption and desorption of insole and insock 63
7.3 Determination of abrasion resistance of insole 66

8 Test methods for outsole 68
8.1 Determination of outsole thickness 68
8.2 Determination of tear strength of outsole 69
8.3 Determination of outsole abrasion resistance 69
8.4 Determination of flexing resistance of outsole 69
8.5 Determination of resistance to hydrolysis of outsole 74
8.6 Determination of resistance to fuel oil 74
8.7 Determination of resistance to hot contact 75

Annex A (normative) Procedure for plasticine calibration 78

Annex B (normative) Assessment of footwear by the laboratory during testing of thermal behaviour 80

Annex C (informative) Footwear sizes 81

Bibliography 82

Annex ZA 83
