DIN EN 14325:2018-08 (E)

Protective clothing against chemicals - Test methods and performance classification of chemical protective clothing materials, seams, joins and as semblages

Contents

Page

European foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Performance classification of materials 7
4.1 Determination of property value for performance classification 7
4.2 Pre-treatment 7
4.2.1 Pre-treatment by cleaning and disinfection 7
4.2.2 Pre-treatment by abrasion 8
4.2.3 Pre-treatment by flexing 8
4.3 Conditioning 8
4.4 Abrasion resistance 8
4.4.1 General 8
4.4.2 Determination of the highest number of abrasion rubs which does not cause damage to the material and which shall be used for the performance classification 8
4.5 Compression-folding (Schildknecht) flex cracking resistance 10
4.5.1 General 10
4.5.2 Determination of the highest number of flexing cycles which does not cause damage to the material and which shall be used for the performance classification 10
4.6 Compression-folding (Schildknecht) flex cracking resistance at -30 °C 12
4.7 Trapezoidal tear resistance 12
4.8 Bursting resistance - deleted requirement 12
4.9 Tensile strength 12
4.10 Puncture resistance 13
4.11 Resistance to permeation by chemicals 13
4.11.1 General 13
4.11.2 Classification of permeation resistance by breakthrough time 13
4.11.3 Classification of permeation resistance by cumulative permeation time 14
4.12 Repellency to liquids 15
4.13 Resistance to penetration by liquids 16
4.14 Resistance to ignition 16
4.15 Resistance to flame 17

5 Performance requirements for seams, joins and assemblages 18
5.1 Determination of property value for rating and classification 18
5.2 Pre-conditioning 18
5.3 Conditioning 18
5.4 Resistance to liquids 18
5.4.1 General 18
5.4.2 Resistance to penetration 18
5.4.3 Resistance to permeation 18
5.5 Seam strength 19
5.6 Pull strength of joins and assemblages 19
5.6.1 General 19
5.6.2 Boots and Gloves (excluding Booties) 19
5.6.3 Body Harness or Belts 20
5.6.4 Lifelines 20

5.6.5 Exhalation Valves 20

6 Test report 21

7 Instructions for use 21

Annex A (informative) Significant technical changes between this document and Annex B (normative) Abrasive paper 24

B.1 Quality of materials 24
B.1.1 Abrasive 24
B.1.2 Backing 24
B.1.3 Adhesive 24

Annex C (normative) Assessment, evaluation and determination of the property values for rating and for performance classification 25

C.1 Expression of results 25
C.2 Outlying data 25
C.3 Uncertainty of measurement 26
C.4 Classification of results 26

Annex D (normative) Use of time to cumulative mass for reporting material permeation resistance 27

D.1 Introduction 27
D.2 General 27
D.3 Basis for classification system 28
D.4 Alternative cumulative permeated mass 28
D.5 Conversion from permeation breakthrough time classification to classification by time to cumulative permeated mass 28
D.6 Cumulative permeated mass values as function of toxicity 29

Annex E (normative) Specification for pressure pot and leak-tightness of equipment 31

E.1 Equipment specification 31
E.2 Volume of pressure pot and apparatus 33
E.2.1 For flexcracking specimens 33
E.2.2 For abrasion specimens 33
E.3 Leak tightness test 33
