

DIN EN 17479:2022-01 (E)

Hearing protectors - Guidance on selection of individual fit testing methods

Contents		Page
European foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Individual fit testing methods	7
4.1	General	7
4.2	Test methods	8
4.3	Reference method for sound attenuation measurements of hearing protectors	9
4.4	Description of different fit testing methods	9
5	Test procedure of the fit testing methods	16
5.1	General	16
5.2	Sound-level measurements with microphone in real ear (MIRE) (method 1)	16
5.3	Audiometric method (method 2)	18
5.4	Audiometric-based method (method 3)	21
5.5	Loudness balancing (method 4)	22
5.6	Acoustic leakage test (method 5)	23
5.7	Air leakage test (method 6)	24
6	Evaluation criteria	25
6.1	Application field of the different methods	25
6.2	Selection according to ease of use	27
6.3	Individual care for workers with hearing impairment	28
6.4	Applicability of methods to the different types of hearing protectors	29
7	Frequency of fit testing	30
8	Uncertainty	30
8.1	General factors for the uncertainty of fit testing	30
8.2	Particular factors regarding the uncertainty for the different fit testing methods	31
8.3	Quantitative approach	33
9	Test report	34
Annex A (informative) Comparison to target values		36
Annex B (informative) Example of a protocol for the determination of measurement uncertainty		40
Bibliography		41
