ISO 11611:2024-06 (E)

Protective clothing for use in welding and allied processes

Contents

Page

Foreword ..... **v**

Introduction ..... **vii**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **2**

4 General and design requirements **5**
4.1 General 5
4.2 Protective clothing 5
4.3 Size designation and fit 5
4.4 Additional protective garments 5
4.5 Pockets and flap closures 6
4.6 Closures and seams 6
4.7 Hardware 6

5 Sampling and pre-treatment **6**
5.1 Sampling 6
5.1.1 General 6
5.1.2 Sampling procedure on fabric materials for the UV transmission measurement 7
5.2 Pre-treatment of material 8
5.3 Ageing 9
5.4 Conditioning 9

6 General performance requirements **9**
6.1 Classification 9
6.2 Tensile strength 9
6.3 Tear strength 10
6.4 Burst strength of knitted materials and seams 10
6.5 Seam strength 10
6.6 Dimensional change of textile materials 10
6.7 Limited flame spread 10
6.7.1 General 10
6.7.2 Testing in accordance with ISO 15025:2016, Procedure A (code letter A1) 11
6.7.3 Testing in accordance with ISO 15025:2016, Procedure B (code letter A2) 12
6.8 Impact of spatter (small splashes of molten metal) 12
6.9 Heat transfer (radiation) 12
6.10 Electrical resistance 13
6.11 Fat content of leather 13
6.12 Protection against UV radiation 13
6.13 Performance requirements 13

7 Marking **14**
7.1 General 14
7.2 Procedure and examples of markings: 15

8 Information supplied by the manufacturer **16**
8.1 General 16
8.2 Intended use 16
8.3 Improper use 17
8.4 Care and maintenance 17

9 Test report ... **17**

Annex A (informative) **General explanations related to the UV protective characteristics of welders' protective clothing and to the measuring methods used** ... **18**

Annex B (normative) **Classification system of the type of welders' clothing (Class 1/Class 2, UV protection period class for welding process groups 'A', 'B'and 'C')** ... **19**

Annex C (normative) **Test procedure for the protective effect against UV radiation emitted by welding processes** ... **21**

Annex D (normative) **Instructions for calculating the effectively transmitted total irradiance E_{eff} and the resulting maximum time of use related to the exposure limit value H_{eff} of 30 J/m^2, by using the determined worst-case UV transmission spectra of fabrics for welding protective garments** ... **23**

Annex E (normative) **Spectral distribution and maximum effectively emitted total irradiance E_{e} of the selected representative welding processes in Table B.2** ... **27**

Annex F (normative) **Spectral weighing function $S_{\mathrm{eff}}(\lambda)$ for use in Table D.1, column F** ... **33**

Annex G (normative) **Determination of property values for rating and classification** ... **38**

Annex H (informative) **Uncertainty of Measurement** ... **39**

Annex I (informative) **Summary of conducted Round Robin trials in the development of the UV transmission test procedure** ... **41**

Bibliography ... **43**
