ISO 21748:2010-11 (E)

Guidance for the use of repeatability, reproducibility and trueness estimates in measurement uncertainty estimation

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Terms and definitions 1

3 Symbols 4

4 Principles 7
4.1 Individual results and measurement process performance 7
4.2 Applicability of reproducibility data 7
4.3 Basic equations for the statistical model 8
4.4 Repeatability data 9

5 Evaluating uncertainty using repeatability, reproducibility and trueness estimates 9
5.1 Procedure for evaluating measurement uncertainty 9
5.2 Differences between expected and actual precision 9

6 Establishing the relevance of method performance data to measurement results from a particular measurement process 10
6.1 General 10
6.2 Demonstrating control of the laboratory component of bias 10
6.3 Verification of repeatability 12
6.4 Continued verification of performance 13

7 Establishing relevance to the test item 13
7.1 General 13
7.2 Sampling 13
7.3 Sample preparation and pre-treatment 14
7.4 Changes in test-item type 14
7.5 Variation of uncertainty with level of response 14

8 Additional factors 15

9 General expression for combined standard uncertainty 15

10 Uncertainty budgets based on collaborative study data 16

11 Evaluation of uncertainty for a combined result 17

12 Expression of uncertainty information 18
12.1 General expression 18
12.2 Choice of coverage factor 18

13 Comparison of method performance figures and uncertainty data 18
13.1 Basic assumptions for comparison 18
13.2 Comparison procedure 19
13.3 Reasons for differences 19

Annex A (informative) Approaches to uncertainty estimation 20

Annex B (informative) Experimental uncertainty evaluation 25

Annex C (informative) Examples of uncertainty calculations 26
