ISO 5725-4:2020-03 (E)

Accuracy (trueness and prec ision) of measurement methods and results - Part 4: Basic methods for the determ ination of the trueness of a standard measurement method

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Symbols 2

5 Determination of the bias of a standard measurement method by an interlaboratory experiment 3
5.1 Experimental design considerations 3
5.1.1 Objective 3
5.1.2 Layout of the experiment 4
5.2 The statistical model 4
5.3 Required number of laboratories and measurements 4
5.4 Requirements of the accepted reference value 6
5.4.1 Approaches to assigning the accepted reference value 6
5.4.2 Materials used in the experiment 6
5.4.3 Requirements of measurement uncertainty of the accepted reference value 7
5.5 Carrying out the experiment 8
5.5.1 Evaluation of precision 8
5.5.2 Check of precision 8
5.5.3 Estimation of the bias of the standard measurement method 10
5.5.4 Example 10

6 Determination of the laboratory bias of one laboratory using a standard measurement method 10
6.1 Experimental design considerations 10
6.1.1 Objective 10
6.1.2 Layout of the experiment 10
6.2 The statistical model 11
6.3 Number of measurement results 11
6.4 Requirements of the accepted reference values 12
6.5 Carrying out the experiment 12
6.5.1 Check of the within-laboratory standard deviation 12
6.5.2 Estimation of the laboratory bias 13

7 Report to the panel and decisions to be taken by the panel 14
7.2 Report by the statistical expert 14
7.3 Decisions by the panel 14

Annex A (informative) Derivation of formulae 15

Annex B (informative) Example of an accuracy experiment 18
