ISO 19030-1:2016-11 (E)

Ships and marine technology - Measurement of changes in hull and propeller performance - Part 1: General principles

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 General principles 2
4.1 Hull and propeller performance 2
4.2 Ship propulsion efficiency and total resistance 3
4.3 Primary parameters when measuring changes in hull and propeller performance 4
4.4 Secondary parameters 5
4.5 Measurement procedures 5
4.5.1 General 5
4.5.2 Data acquisition 6
4.5.3 Data storage 6
4.5.4 Data preparation 6

5 Performance indicators 6
5.1 Dry-docking performance: Change in hull and propeller performance following present out-docking as compared with the average from previous out-dockings 7
5.2 In-service performance: The average change in hull and propeller performance over the period following out-docking to the end of the dry-docking interval 8
5.3 Maintenance trigger: Change in hull and propeller performance from the start of the dry-docking interval to a moving average at any chosen time 9
5.4 Maintenance effect: Change in hull and propeller performance measured before and after a maintenance event 10

6 Measurement uncertainties and the accuracy of the performance indicators 11

Annex A (informative) Method and assumptions for estimating the uncertainty of a performance analyses process 13
