Ships and marine technology - Measurement of changes in hull and propeller performance - Part 1: General principles

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 General principles	2
4.1 Hull and propeller performance	2
4.2 Ship propulsion efficiency and total resistance	3
4.3 Primary parameters when measuring changes in hull and propeller performance	4
4.4 Secondary parameters	5
4.5 Measurement procedures	5
4.5.1 General	5
4.5.2 Data acquisition	6
4.5.3 Data storage	6
4.5.4 Data preparation	6
5 Performance indicators	6
5.1 Dry-docking performance: Change in hull and propeller performance following present out-docking as compared with the average from previous out-dockings	7
5.2 In-service performance: The average change in hull and propeller performance over the period following out-docking to the end of the dry-docking interval	8
5.3 Maintenance trigger: Change in hull and propeller performance from the start of the dry-docking interval to a moving average at any chosen time	9
5.4 Maintenance effect: Change in hull and propeller performance measured before and after a maintenance event	10
6 Measurement uncertainties and the accuracy of the performance indicators	11
Annex A (informative) Method and assumptions for estimating the uncertainty of a performance analyses process	13
Bibliography	30
