DIN EN ISO 12215-5:2020-03 (E)

Small craft - Hull construction and scantlings - Part 5: Design pressures for monohulls, design stresses, scantlings determination (ISO 12215-5:2019)

Contents

Page

European foreword ... **4**

Annex ZA (informative) **Relationship between this European Standard and the essential requirements of Directive 2013/53/EU aimed to be covered** ... **5**

Foreword ... **6**

Introduction ... **8**

1 Scope ... **9**

2 Normative references ... **10**

3 Terms and definitions ... **10**

4 Symbols ... **12**

5 General ... **14**
5.1 Materials ... 14
5.2 Overall procedure for scantlings determination ... 14

6 Main dimensions, data and areas ... **15**
6.1 Dimensions and data ... 15
6.2 Areas ... 15
6.2.1 General ... 15

7 Dimensions of panels and stiffeners ... **17**
7.1 General ... 17
7.2 Rectangular grid of panels and stiffeners ... 18
7.3 Non-rectangular panels ... 20
7.3.1 Trapezoidal or triangular panels ... 20
7.3.2 Other shapes ... 21
7.4 Pressure on a panel or a stiffener ... 22

8 Pressure adjusting factors ... **23**
8.1 General ... 23
8.2 Design category factor k_{DC} ... 23
8.3 Dynamic load factor k_{DYN} ... 23
8.4 Longitudinal pressure distribution factor k_L ... 24
8.5 Area pressure reduction factor k_{AR} ... 25
8.6 Superstructures and deckhouse pressure reduction factor k_{SUP} ... 26
8.7 Pressure correcting factor k_{SLS} for slamming of light and stable sailing craft ... 26

9 Design pressures ... **27**
9.1 Design pressure for motor craft ... 27
9.2 Design pressure for sailing craft ... 29
9.3 Watertight bulkheads and integral tank boundaries design pressure ... 30
9.3.1 General ... 30
9.3.2 Integral tanks wash plates ... 31
9.3.3 Collision bulkheads ... 31
9.3.4 Non-watertight or partial bulkheads ... 32
9.3.5 Centreboards of lifting keel wells ... 32
9.3.6 Transmission of pillar loads ... 32
9.3.7 Loads from outboard engines ... 32

10 Mechanical properties and design stresses 32
10.1 Boat building quality factor k_{BB} 32
10.2 Assessment method factor k_{AM} 33
10.3 Design stresses according to material and calculation method 33

11 Methods for structural analysis and scantlings determination 35
11.1 The six available methods 35
11.2 Method 1: "Simplified" method 35
11.3 Method 2: "Enhanced" method (ply by ply analysis) 36
11.4 Method 3: "Developed" method for any laminate, including non-balanced laminates 36
11.5 Method 4: "Direct test method" 36
11.6 Method 5: "FEM" Finite Element Method 36
11.6.1 General considerations 36
11.6.2 General guidance for assessment by 3-D numerical procedures 37
11.6.3 Boundary assumptions and load application 37
11.6.4 Model idealisation 37
11.7 Method 6: Alternative test: Drop test 37
11.8 "Good practice" minimal thickness 38

12 Craft for professional use: Commercial craft and workboats 38

13 Owner's manual 38
13.1 General 38
13.2 Normal mode of operation 38
13.3 Information to take care of sandwich plating 38
13.4 Information required by Annex J for commercial craft and workboats 38

14 Application form 38

Annex A (normative) **Application of methods of analysis 1 to 3 of Table 18 ..... 39**

Annex B (normative) **Mechanical properties and design stress of metals 66**

Annex C (normative) **FRP laminates properties and calculations 69**

Annex D (normative) **Drop test for craft <6 m 81**

Annex E (normative) **Sandwich calculations 84**

Annex F (normative) **Wood/plywood laminate properties and calculations 88**

Annex G (normative) **Geometric properties of stiffeners 97**

Annex H (normative) **Laminate stack analysis for plating and stiffeners 109**

Annex I (informative) **"Good practice " values for minimum thickness or dry fibre mass 124**

Annex J (normative) **Commercial craft and workboats — Additional requirements 126**

Annex K (informative) **Loads induced by outboard engines 129**

Annex L (informative) **Application form of ISO 12215-5 ..... 131**
