ISO 2307:2019 (E)

Fibre ropes — Determination of certain physical and mechanical properties

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

- 4.1 Calculation of the linear density
- 4.2 Measurement of the diameter, lay length and braid pitch
- 4.3 Measurement of the elongation of the rope
- 4.4 Measurement of the breaking force

5 Apparatus

6 Sampling

- 6.1 Composition of the batch to be sampled
- 6.2 Sample size
- 6.3 Selection of samples

7 Test pieces for tensile testing and force-elongation measurements

- 7.1 Length
- 7.2 Number of test pieces
- 7.3 Taking the test pieces

8 Conditioning

9 Procedure

- 9.1 General
- 9.2 Initial measurements
- 9.3 Mounting the test piece on the testing machine
- 9.4 Measurement of diameter, lay length or braid pitch and gauge length
- 9.5 Bedding-in of the test piece
- 9.6 Measurement of the elongation of the rope
- 9.7 Measurement of the breaking force

10 Linear density

11 Expression of results

- 11.1 General
- 11.2 Linear density, ρ1
- 11.3 Diameter, lay length or braid pitch
- 11.4 Elongation
- 11.5 Actual breaking force

12 Determination of water repellency

- 12.1 General
- 12.2 Principle
- 12.3 Test pieces
- 12.3.1 General
- 12.3.2 Whipping
- 12.3.3 Cutting the samples
- 12.3.4 Sealing

12.4 Procedure
12.4.1 First weighing
12.4.2 Second weighing
12.4.3 Third weighing
12.4.4 Drying the specimens
12.4.5 Fourth, fifth and sixth weighing
12.5 Results of tests

13 Determination of lubrication and finish content

13.1 General
13.2 Reagents
13.3 Preparation of samples
13.4 Determination of water content
13.5 Determination of lubrication and finish content
13.6 Calculation of lubrication and finish content

14 Test report

Annex A (normative) Reference tension

Annex B (informative) Alternative procedures for ropes with high breaking forces

B.1 General
B.2 Realization factors for current ropes
B.2.1 Overview
B.2.2 Sampling
B.2.3 Testing
B.2.4 Rope breaking strength
B.3 Realization factors for a specific rope design
B.3.1 General
B.3.2 Prototype tests
B.3.3 Testing rope yarn strength
B.3.4 Calculating realization factor
B.4 Validating changes for a specific rope design
B.5 Example calculation

Annex C (normative) Determination of the force-elongation coordinates on a separate test piece

Annex D (informative) Test report — Fibre ropes
