ISO 24375:2026-09 (E)

Ships and marine technology - Model tests for ships and offshore structures in snow-covered ice

Contents

Page

Foreword ..... **iv**

Introduction ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Test facility and instruments **2**
4.1 Test facility 2
4.2 Test instruments 2
4.2.1 Load sensors 2
4.2.2 Video camera 2
4.2.3 Data acquisition system 2

5 Modelling of snow-covered ice **3**
5.1 Approaches 3
5.1.1 General 3
5.1.2 Additional ice thickness 3
5.1.3 Natural snow from field 3
5.1.4 Artificially produced snow cover 3
5.2 Property measurements of snow-covered model ice 4

6 Ice resistance tests for ships in snow-covered ice **4**
6.1 General 4
6.2 Test method 4
6.2.1 Test setup 4
6.2.2 Tests for ship resistance 5
6.3 Analysis of results 5
6.3.1 Correction to target ice conditions 5
6.3.2 Full-scale extrapolation 6
6.4 Required test documentation 7
6.4.1 Parameters of snow-covered model ice to measure 7
6.4.2 Experiment setup 7
6.4.3 Experiment results 7

7 Ice load tests for offshore structures in snow-covered ice **7**
7.1 General 7
7.2 Test method 8
7.2.1 Test setup 8
7.2.2 Tests for fixed structures 8
7.2.3 Tests for floating structures 8
7.3 Analysis of results 9
7.3.1 Correction to target ice conditions 9
7.3.2 Full-scale extrapolation 9
7.4 Required test documentation 10
7.4.1 Snow-covered model ice parameters to measure 10
7.4.2 Experiment setup 10
7.4.3 Experiment results for fixed structures 10
7.4.4 Experiment results for floating structures 10

Annex A (informative) **Diagram of test facility** **12**

Annex B (informative) **Examples of artificially produced snow-covered model ice** **13**

Bibliography **16**
