

ISO 5-3:2009-12 (E)

Photography and graphic technology - Density measurements - Part 3: Spectral conditions

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Requirements	3
4.1	General	3
4.2	Influx spectrum	3
4.3	Types of instruments	5
4.4	Spectral products	5
4.5	Computation of ISO 5 standard density from spectral data	6
4.6	Sample conditions	6
4.7	Reference standards	6
5	Notation	7
6	Types of ISO 5 standard density	7
6.1	ISO 5 standard visual density	7
6.2	ISO 5 standard printing density	7
6.3	ISO 5 standard status A density	8
6.4	ISO 5 standard status M density	9
6.5	ISO 5 standard status T density	9
6.6	ISO 5 standard status E density	9
6.7	ISO 5 standard narrow-band density	10
6.8	ISO 5 standard status I density	10
6.9	ISO 5 standard type 3 density	11
7	Spectral conformance, repeatability, stability and bias	11
7.1	Spectral conformance	11
7.2	Repeatability, stability and bias	11
Annex A (normative) Reference tables of spectral products and weighting factors		25
Annex B (normative) Computation of ISO 5 standard density from spectral data		26
Annex C (informative) Method used to derive spectral weighting factors based on historical spectral product data		28
Annex D (informative) Method used to derive abridged spectral weighting factors from 1 nm reference spectral product data		29
Annex E (informative) Plots of relative spectral power distributions for influx spectra, and spectral products for ISO 5 standard density		33
Annex F (informative) Spectral conformance		40
Bibliography		41
