Graphic technology and photography - Colour characterization of digital still cameras (DSCs) - Part 2: Considerations for determining scene analysis transforms

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Definitions	1
3	Goals	4
4	Fundamental colour-related DSC characteristics	5
4.1	Camera gain	5
4.2	Camera dark current	5
4.3	Focal plane opto-electronic conversion function (FP OECF)	6
4.4	Camera opto-electronic conversion function (Camera OECF)	6
4.5	Camera flare average percent	6
4.6	Camera spectral sensitivities (including non-removable optical elements)	6
4.7	Removable optical element spectral transmittances	6
5	Scene analysis transform parameters	7
5.1	Determined using spectral measurements	7
5.2	Determined using test targets	8
6	Scene analysis transform determination using spectral measurements	9
7	Scene analysis transform determination using test targets	10
7.1	Procedure	10
7.2	Test target characteristics	12
7.3	Capturing images of test targets	12
8	Applying the scene analysis transform and encoding	13
9	Considerations for selecting scene analysis transforms	14
10	Suggested metadata for scene-referred colour encodings	14
10.1	Camera characteristics	14
10.2	Colour encoding characteristics	14
10.3	Image specific characteristics	14
Annex A (informative)	Example calculation results	15
