

ISO/TS 17321-4:2022-11 (E)

Graphic technology and photography - Colour characterization of digital still cameras (DSCs) - Part 4: Programmable light emission system

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Description	2
4.1	General	2
4.2	Operating condition	3
4.3	Description of the system	3
4.3.1	General	3
4.3.2	Wavelength	4
4.3.3	Resolution of digital-analogue conversion for light emitting devices	4
4.3.4	Output window size	4
4.3.5	Luminance	4
4.3.6	Uniformity	4
4.3.7	Angular characteristics	5
4.3.8	Repeatability	5
4.4	Reporting form	6
5	Generation and evaluation of a spectral match	7
5.1	Generation of a spectral match	7
5.2	Evaluation of a spectral match	8
Annex A (informative) Spectral match generation, scaling, and evaluation examples		9
Annex B (informative) Several guideline information to design the PLES		11
Annex C (informative) An example for the PLES required and recommended conditions		12
Bibliography		13
