fib-Symposium

Concrete and Environment

Berlin, Germany
3-5 October 2001

Haus der Kulturen der Welt
(House of World Cultures)
John-Foster-Dulles-Allee 10
10557 Berlin
Germany

organized by:
German Group of fib
DBV - Deutscher Beton- und Bautechnik-Verein E.V.
DAfStb - Deutscher Ausschuss für Stahlbeton im DIN Deutsches Institut für Normung e.V.

Contents	*No.*

Foreword – President´s Message	*FW1*
Foreword – Organizing Committee of the fib-Symposium	*FW2*
Keynotes A1, A2, B1 and B2	*KNI*
Session A1: Aesthetical Aspects of Concrete Structures	*A1*
Session B1:Sustainability and Life Cycle Analysis (I)	*B1*
Session A2: Protective Structures	*A2*
Session B2: Sustainability and Life Cycle Analysis (II)	*B2*
Keynotes A3, A4, A5, B3, B4 and B5	*KNII*
Session A3 Strengthening, Prolongation of Service Life, Service Life Design	*A3*
Session B3: Material Aspects of Concrete and Environment	*B3*
Session A4: Prediction and Durability (I)	*A4*
Session B4: Recycling	*B4*
Session A5: Prediction and Durability (II)	*A5*
Session B5: Release from Cement bound Materials	*B5*
Keynotes A6 and B6	*KNIII*
Session A6: Energy Conservation, Environmental Aspects in Operation, Aspects of Health and Working Environment	*A6*
Session B6: Practical Construction, Demolition, Demountable Structures	*B6*

Contents **No.**

Keynotes A1, A2, B1 and B2

Approaches to Sustainability in Building Construction	*Sjöström*	KN1
Establishing Performance Criteria for Concrete Protective Structures	*van Breugel*	KN2

Session A1: Aesthetical Aspects of Concrete Structures

Bridge Design and Urban Development	*Sigrist, Leuthard*	A1-1
Bright High-Performance Concrete by Using Metakaolin	*Dehn, König*	A1-2
Execution and Assessment of Architectural Concrete Structures - Design Requirements and Limits of Technology	*Meyer*	A1-3
Realisation of Form and Function of a Unique Structure with Innovative Structural Concepts and Design	*Kanappan, Ramakrishna, Ranganath*	A1-4

Session B1: Sustainability and Life Cycle Analysis (I)

Guide for Sustainable Design	*Günther, Ornth*	B1-1
Sustainable Pre-Fabrication	*Punkki*	B1-2
Comprehensive Approach to LCA of Construction Materials and Buildings	*Reinhardt, Kümmel*	B1-3
Environmentally based Optimisation of Concrete Floor Slabs	*Hajek*	B1-4
The Environmental Effects of Cement and Concrete within the Concept of Sustainable Development	*Hauer*	B1-5
Durability Design and Life Cycle Analysis in Reinforced Concrete Engineering	*Krätzig, Petryna, Pölling, Stangenberg*	B1-6

Session A2: Protective Structures

Application of Concrete and Reinforced Concrete on Construction and Transformation "Shelter Object" of the Destroyed Chernobyl NPP Fourth Block	*Kryvosheyev,. Nemchynov, Bambura*	A2-1
Performance of Concrete Based Building Materials Against Blast and Impact	*Gebbeken, Greulich, Pietzsch*	A2-2
Design Assistance for Secondary Barriers Produced of Uncoated Concrete Structures	*Brauer, Wiens*	A2-3
Probability of failure and risk using a concrete layer as the second barrier to water-endangering fluids	*Curbach, Proske*	A2-4

Session B2: Sustainability and Life Cycle Analysis (II)

Comparison of the Ecological Properties of Concrete, Steel and Timber	*Lünser*	B2-1
Durability of Resource Saving "Green" Types of Concrete	*Tange Jepsen, Mathiesen, Munch-Petersen, Bager*	B2-2
Environment-Friendly "Green" Concrete Structures	*Edvardsen, Tollose*	B2-3
Sustainable Facts for Cement and Cement Bounded Building Products	*Huber*	B2-4
Ecological Sound Cement Manufacture in Switzerland	*Grieser, Jacobs, Hunkeler*	B2-5

Contents **No.**

Keynotes A3, A4, A5, B3, B4 and B5

Environmental Aspects of Construction Materials with Respect to Sustainability	*Schneider*	KN3
Performance Based Design of Future Concrete Structures: The Challenge of Integrating Strength, Durability and Sustainability	*Rostam*	KN4

Session A3: Strengthening, Prolongation of Service Life, Service Life Design

Service Life of Concrete Offshore Structures	*Helland*	A3-1
Service Life Prolongation Concepts: How to Watch and Listen Concrete Structures	*Stubler, Youdan*	A3-2
Strengthening of Concrete Members with Externally Bonded Fibre Reinforced Polymer Reinforcement	*Matthys, Taerwe*	A3-3
Method for Increasing Shear Capacity of Old Reinforced Concrete Girders	*Kollegger, Martinz*	A3-4
Opinions on Static Renewal of Precast Panel Concrete Buildings	*Štěpánek*	A3-5
Structural Monitoring of a Pre-Stressed Concrete Girder Bridge and a Quay Wall with Bragg Grating Sensors	*Moerman, Taerwe, Coppens, De Waele, Degrieck, Callens, Baets*	A3-6

Session B3: Material Aspects of Concrete and Environment

Use of Granulated Blast Furnace Slag – A Contribution to Sustainable Development in Construction Industry	*Härdtl*	B3-1
Fly Ash Obtained form Co-Combustion - State of the Art in Europe	*van den Berg, Vissers, Hohberg, Wiens*	B3-2
Simulation of the Corrosion Behaviour of Concrete Elements Reinforced with High Performance Steel	*Brühwiler, Denarié, Conciatori*	B3-3
Behavior of Prestressed Concrete Beams with Artificial Lightweight Aggregate Made from Coal Ash	*Watanabe, Suzuki, Sakurada, Murai*	B3-4

Session A4: Prediction and Durability (I)

Prediction of Chloride Ingress into Concrete with Additions	*Wiens, Schiessl*	A4-1
Probabilistic Service Life Design: Application of the DURACRETE-Approach to Existing Structures	*Gehlen, Schiessl, Pabsch*	A4-2
A study on the applicability of ECC to highway bridge slabs	*Ichinomiya, Suda, Kanda, Masumoto*	A4-3
Effects of Curing Conditions on Strength and Permeability Properties of Concretes with Various Fly Ash Contents	*Atac, C. Tasdemir, Sonmez, A. Tasdemir*	A4-4

Contents **No.**

Session B4: Recycling

Design of Concrete Structures Made from Recycled Aggregates – A Global Recommendation following the DIN 1045-1	*Zilch, Roos*	B4-1
Structural RC Members from Recycled Aggregate Concrete	*Ajdukiewicz, Hulimka, Kliszczewicz*	B4-2
Technical, Environmental and Economic Factors Affecting Present and Future Volumes of Recycled Construction Materials in Germany	*Schmidt*	B4-3
Recycling of Offshore Concrete Structures	*Olsen*	B4-4
Concrete Design toward Complete Recycling	*Tamura, Noguchi, Tomosawa, Kitsutaka*	B4-5

Session A5: Prediction and Durability (II)

Durability of High-Performance Concrete and Life-Time Prediction	*Setzer, Palecki*	A5-1
Simulation of Corrosion in Sewer Systems by Laboratory Testing	*Monteny, De Belie, Vincke, Beeldens, Taerwe*	A5-2
HPC – American Practice, European Perspective	*Bodi, Bruce*	A5-3
Computational Durability Analysis of Concrete Structures Considering Damage, Moisture Transport and Chemical Dissolution Process	*Meschke, Bangert, Grasberger, Kuhl*	A5-4

Session B5: Release from Cement bound Materials

Release of Inorganic and Organic Substances from Cement Bound Materials	*Spanka, Schneider*	B5-1
The Influence of The Characteristics of Cement Hydration on Leaching Calcium from Hardened Mortar	*Hisada, Oguchi, Ooi, Nagataki*	B5-2
Environmental Compatibility of Fresh Concrete in Contact with Soil and Ground Water	*Brameshuber, Hohberg, Uebachs*	B5-3
Modelling of the Leaching Behaviour of Concrete in Contact with Ground Water	*Hohberg*	B5-4
Leaching of a Concrete Superplasticizer from Fresh Cement in Contact with Groundwater	*Ruckstuhl, Suter, Kohler, Giger*	B5-5

Contents **No.**

Keynotes A6 and B6

Environment and Energy Behaviour of our Buildings	*Gertis*	n.a.
Global Environmental Issue in Construction Industry Research & Development and Practice in Japanese Construction Industry	*Fujimori*	KN5

Session A6: Energy Conservation, Environmental Aspects in Operation, Aspects of Health and Working Environment

Adiabatic Curing Cuts Carbon Dioxide and Saves Energy	*Imai, Yoshioka, Wu, Takahashi*	A6-1
Seasonal Storage of Solar Energy in Hot-Water Tanks made out of High Performance Concrete	*Reineck, Lichtenfels, Greiner*	A6-2
Health- and Environment-Related Aspects of the Use of Cement Bound Construction Products	*Thielen*	A6-3
Improvement of Working Environment in Concrete Construction by the use of Self-Compacting Concrete	*Bartos, Cechura*	A6-4
Self-compacting Concrete – Examples of Application	*Vitek*	A6-5
Practical Experiences with the Application of Self-Compacting Concrete in Germany	*Brameshuber, Uebachs*	A6-6
Application of Photocatalysis to Develop Pollutant Degrading and Self-cleaning Building Materials	*Benedix, Dehn, Quaas*	A6-7

Session B6: Practical Construction, Demolition, Demountable Structures

Experimental Study on Seismic Performances of Precast Segmental PC Pier	*Hishiki, Ichinomiya, Arai*	B6-1
Potsdamer Platz Berlin – Environmental Aspects During Construction	*Falkner*	B6-2
Removal of Gypsum Plaster by the Use of Microwaves	*Gerlach, Eibl, Stempniewski*	B6-3
A Complete Testing Including Earthquake Behaviour of a Demountable Concrete Structure	*Popaescu, Praun, Schiau*	B6-4
Condition Assessment of Concrete Bridges During Demolition	*Vogel*	B6-5
Design for Disassembly – Approach towards Sustainable Building	*Graubner, Reiche*	B6-6

Foreword – President´s Message

"Concrete and the environment" is on its way to become one of the major topics in practical design and construction. During the last decade's research on concrete and concrete structures has mainly focused on aspects like safety and serviceability. The consciousness of the significance of durability and sustainability is still relatively young. However, it is now already a common feeling that those aspects must play a crucial role in the near future. This new way of thinking will have important consequences for the direction in which design strategies will develop. The same holds true for the process of execution and the developments of contractual regulations, code requirements and research.

fib is an international organization with National Groups in 39 countries and members or participants in its work from about 60 countries. Its main goal is to stimulate and coordinate future-oriented research and to give direction to the development of new building codes. In the past CEB and FIP, the organizations, which preceded *fib*, published "Model Codes" for Structural Concrete in 1963, 1978 and 1990. Those Model Codes were intended to be a source of information for the development of national and international codes. The Model Code 1990 has been an important basis for the new Eurocode, which is bound to be the code used throughout Europe, as such stimulating and strengthening the international cooperation.

The interest of CEB and FIP in durability in the past was mainly directed to durability in the sense of expected lifetime. The way in which deterioration processes endanger the life of a structure was well described in CEB Bulletin 183 "Durable Concrete Structures". This Bulletin was the onset to the development of the new approach "Design for Durability". The conceptual work leading to this new approach was mainly done within the scope of the European research program "Duracrete". The design strategy developed enables predicting the forthcoming need for repair, to select the most appropriate maintenance strategy and to allow cost optimization calculations for concrete structures with due regard to their lifetime. It furthermore gives impetus to the introduction of defined performance concrete's, taylor-made for the governing environmental conditions. *fib* is now starting its work for a new Model Code for Concrete Structures. Design for durability will be a major point of attention. Studies in this area are now performed in *fib*-Commission 5 under the chairmanship of Dr. Steen Rostam from Denmark.

However, in spite of its significance, "durability" as a thematic indication is still too narrow. In order to save our environment from unnecessary burdens now and in the future and to improve the quality of life, suitable strategies have to be developed. This covers a wide area, from the development of clean production methods to the generation of structural systems, which can be adapted to changing demands in time, methods for the optimum use of resources, and new concepts for concrete structures protecting the environment. Such subjects are studied in *fib*-Commission 3, under the chairmanship of Prof. Peter Schiessl from Germany. These relatively new areas are of utmost importance for a responsible use of concrete in the near future.

In the area of durability and sustainability considerable work is still necessary in order to develop new ideas and methods, and establish regulations. Therefore this symposium has been organized exactly at the right time. The papers in the proceedings cover various areas of importance, give a good idea of the state of the art and show perspectives to new ideas and developments. We are indebted to our German colleagues for their initiative to organize this symposium and the efforts they have done to make it a major event. We sincerely hope that this symposium will be a milestone in a very important new process of development.

Joost Walraven

President of fib

Foreword – Organizing Committee of the fib-Symposium

Environmental aspects or, in other words, sustainable development have become a major concern of our time. The general principle of sustainable development has been first formulated by the Brundtland Commission in 1987. Due to the adoption of the Agenda 21 in Rio de Janeiro by 179 Nations in June 1992, the course for sustainable development was set. As a result of that a gradual change in the fundamental social and economic values will take place. Sustainable development means the satisfaction of the present-day needs without risking that future generations will not have the chance to satisfy their needs.

National legislation has taken place in several countries following these principles, thereby strongly influencing technical rules. This development will have a major impact on all activities related to design and construction in the future.

Therefore, the fib-Symposium "Concrete and Environment" will deal with these aspects and highlight the following main subjects:

- Impact of concrete structures on man and environment,
- influence of environment on the service life of concrete structures,
- ability of concrete structures to protect man and environment against hazards.

The symposium with its highly relevant programme will offer an international forum for engineers active in practice or research, politicians, architects, consultants and contractors.

Peter Schiessl Hans-Ulrich Litzner
