DIN SPEC 91530:2025-12 (E)

Distributed AI/process interface for self-optimizing process machines; Text in English

Contents

Page

Foreword . . . 4
Introduction . . . 6
1 Scope . . . 8
2 Normative references . . . 8
3 Terms and definitions . . . 8
4 Fundamentals . . . 10
4.1 Node ID . . . 10
4.2 Object ID . . . 10
5 Methods . . . 11
5.1 Basics . . . 11
5.2 Linkage between nodes . . . 13
5.3 Extendability of state vectors . . . 13
5.4 Data fusion and backpropagation period . . . 14
5.5 Differentiable Data Fusion . . . 14
5.5.1 General . . . 14
5.5.2 Representing Process Parameters in Data Fusion . . . 15
5.6 Backpropagation . . . 15
5.6.1 General . . . 15
5.6.2 Backpropagation of probe-gradients . . . 16
5.7 Optimization . . . 16
6 Node Types . . . 17
6.1 Process node . . . 17
6.1.1 Fundamentals . . . 17
6.1.2 Constants and properties . . . 17
6.1.3 Inner structure . . . 18
6.1.4 Exemplary Main loop . . . 19
6.2 Loss node . . . 20
6.2.1 Fundamentals . . . 20
6.2.2 Switching between data fusion and backpropagation period . . . 20
7 Messages and expected behavior . . . 20
7.1 Format and Serialization . . . 20
7.2 Information messages . . . 20
7.2.1 Content and basics . . . 20
7.2.2 Reason to send . . . 21
7.2.3 Expected Reaction . . . 21
7.3 Gradient messages . . . 22
7.3.1 Content and basics . . . 22
7.3.2 Reason to send . . . 22
7.3.3 Expected Reaction . . . 22
7.3.4 Loss channel name format . . . 23
7.4 Node information message (NodeInfo) . . . 23
7.5 Probe-response message (ProbResp) . . . 24
7.6 Node-context message (NodeContext) . . . 24
7.7 Add Neighbor (AddNeighbor) . . . 25
7.8 Control messages . . . 25
7.8.1 Get Node Information (gNodeInfo) . . . 25
7.8.2 Get Node Context (gNodeContext) . . . 26
7.8.3 Freeze state, Zero gradients, Backpropagation (FZB) . . . 26
7.8.4 Update step, Unfreeze, Information exchange (UUI) . . . 26
7.8.5 Accept message . . . 27
7.8.6 Decline message . . . 27

8 Implementation in MQTT . . . 27
8.1 Fundamentals . . . 27
8.2 Topics . . . 28
8.3 Initial conditions . . . 30
8.4 Typical sequences . . . 30
8.4.1 Standard data fusion and switch to backpropagation . . . 30
8.4.2 Standard backpropagation and switch to data fusion . . . 30
8.4.3 Introduction of new neighbor . . . 30
Annex A (informative) **Reference implementation** . . . 32
Annex B (normative) **ASN.1 Definition of the message format** . . . 33
Bibliography . . . 35

Figures

Figure 1 — Overview of the information translation and backpropagation steps happening during message exchange between two process nodes. . . . 13
Figure 2 — Illustration of the inner data object structure of a process node. This aims to provide a clearer image of the expected backend. The actual ANT-interface standardized by this document is illustrated as the red dashed line. . . . 18
Figure A.1 — Class diagram of reference implementation (reduced) . . . 32

Tables

Table 1 — Constant properties of a process node. . . . 17
Table 2 — Variable properties of a process node. . . . 17
Table 3 — Contents of an *information* message . . . 20
Table 4 — Contents of a *gradient* message . . . 22
Table 5 — Contents of an *node information* message . . . 23
Table 6 — Contents of a *probe-response* message . . . 24
Table 7 — Contents of a *node-context* message . . . 24
Table 8 — Contents of an *add neighbor* message . . . 25
Table 9 — Contents of a *get node information* message . . . 25
Table 10 — Contents of a *get node context* message . . . 26
Table 11 — Contents of an *FZB* message . . . 26
Table 12 — Contents of an *UUI* message . . . 26
Table 13 — Contents of an *accept* message . . . 27
Table 14 — Contents of a *decline* message . . . 27
Table 15 — Standard MQTT-topics . . . 29
