DIN SPEC 91535:2026-10 (E)

Test methods for determining the energy efficiency of AI systems, taking both software and hardware into account; Text in English

Inhalt

Seite

Foreword 4

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Abbreviations and Symbols 11

5 Overall methodology 12
5.1 General 12
5.2 Introduction 12
5.3 AI system (scope and boundaries) 13
5.4 Test protocol 14
5.5 Energy measurement setup 15
5.6 Energy measurement challenges 18

6 Recommended approach 19
6.1 General 19
6.2 Test Protocol 19
6.3 Measurement Protocol 19

Annex A (informative) Illustrative example: Measuring the energy consumption of training and inference of a BERT NLP model on GPUs 20
A.1 General 20
A.2 Test protocol 20
A.3 AI system 21
A.4 Energy measurement setup 21
A.5 Energy measurement challenges 22
A.6 Suggested approach 22

Annex B (informative) Illustrative example: Measuring energy consumption for image classification on edge devices 23
B.1 General 23
B.2 Test protocol 23
B.3 AI system 23
B.4 Energy measurement setup 24

Annex C (informative) Informative references with relevance for this document 25

Bibliography 30

Figures

Figure 1 — Illustration of the AI Test Setup with 3 main components, AI system, Test Protocol and Energy Measurement Setup 13

Figure 2 — Illustration of different types of AI software deployment 14

Figure 3 — Overview of probe locations (different locations for measurement possible either E_{IT, 1}, E_{IT, 2}, E_{IT, 3} 17
