ISO/IEC 14543-4-1:2008-05 (E)

Information technology_- Home electronic system (HES) architecture_- Part_4-1: Communication layers_- Application layer for network enhanced control devices of HES Class_1

CONTENTS

FOREWORD 6
INTRODUCTION 7
1 Scope 8
2 Normative references 8
3 Terms, definitions and abbreviations 8
3.1 Terms and definitions 8
3.2 Abbreviations 11
4 Conformance 11
5 Services of the application layer 11
5.1 Communication modes 11
5.2 Service primitives of the application layer 12
5.2.1 General 12
5.2.2 Case 1: Application objects when obtaining other node status 12
5.2.3 Case 2: Application objects when controlling other node functions 13
5.2.4 Case 3: Application objects when notifying another node of self-node status 14
6 Application layer protocol data unit (APDU) 16
6.1 Overview 16
6.2 Data link header (DHD) 18
6.3 Source/destination data link address (SDLA/DDLA) 18
6.4 Application data counter (ADC) 18
6.5 Application data (ADATA) 19
6.6 Object message header (OHD) 19
6.7 Application object (AOJ) 19
6.8 Application property code (APC) 20
6.9 Application service code (ASC) 21
6.10 Application property value data (APD) 21
6.11 Compound application service code (CpASC) 21
7 Application layer services 22
7.1 General 22
7.2 Basic application service 22
7.2.1 Basic application 22
7.2.2 Property value write service 27
7.2.3 Property value read service 27
7.2.4 Property value notification service 28
7.2.5 Property value element-stipulated write service 28
7.2.6 Property value element-stipulated read service 29
7.2.7 Property value element-stipulated notification service 30
7.2.8 Property value element-stipulated addition service 31
7.2.9 Property value element-stipulated deletion service 32
7.2.10 Property value element-stipulated existence confirmation service 33
7.2.11 Property value element addition service 33
7.2.12 Property value notification (response required) service 34

7.2.13 Property value element-stipulated notification (response required) service 34
7.3 Compound application service 35
7.3.1 General 35
7.3.2 Property value write request (requiring no response) service 37
7.3.3 Property value write request (requiring a response) service 38
7.3.4 Property value read request service 39
7.3.5 Property value notification service 40
7.3.6 Property value notification (requiring a response) service 41
7.4 Access limitation 41
8 Application object 42
8.1 General 42
8.2 Types of objects 43
8.2.1 Device objects 43
8.2.2 Profile objects 43
8.2.3 Communications definition objects 44
8.2.4 Service objects 44
8.3 Application property value data types 44
8.3.1 APD range 44
8.3.2 Class-specific mandatory properties 45
8.3.3 Properties that must have a status change announcement function 45
8.3.4 Array 45
9 Communication processing block state transitions 48
9.1 General 48
9.2 State transitions 48
9.2.1 Halt state 48
9.2.2 Cold start (1) state 48
9.2.3 Cold start (2) state 48
9.2.4 Cold start (3) state 48
9.2.5 Warm start state 49
9.2.6 Communication stop state 49
9.2.7 Normal operation state 49
9.2.8 Temporary halt state 49
9.2.9 Error stop state 49
Annex A (informative) Guidelines for application design 51
A.1 System architecture 51
A.2 System entry, exit, registration and deletion 52
A.3 Confirming the node existence 53
Annex B (informative) API functions 54
B.1 API function for transport and network layer 54
B.2 API functions for application layer 54
B.2.1 General 54
B.2.2 Constant specifications 54
B.2.3 Detail API functions 58
