

ISO/IEC 18012-2:2012-07 (E)

Information technology - Home Electronic System - Guidelines for product interoperability - Part 2: Taxonomy and application interoperability model

Contents	Page
FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	11
2 Normative references	11
3 Terms, definitions, abbreviations and conventions.....	12
3.1 Terms and definitions	12
3.2 Abbreviations	15
3.3 Conventions	15
4 Conformance requirements.....	15
5 Application interoperability model	16
5.1 Overview	16
5.2 Application objects and interworking functions.....	16
6 Interaction model.....	19
6.1 Overview	19
6.2 Application objects	19
6.3 Binding map	20
6.4 Events.....	21
6.5 Event bus	21
7 Home electronic system application interoperability taxonomy.....	22
7.1 Classification.....	22
7.2 Application domain	24
7.2.1 Definition.....	24
7.2.2 Application domain list.....	24
7.3 Functional object.....	25
7.3.1 Definition	25
7.3.2 Functional object structure	25
7.3.3 Functional action	25
7.3.4 Functional object list.....	25
7.4 Application object.....	25
7.4.1 Definition.....	25
7.4.2 Application object structure	26
7.4.3 Property	26
7.4.4 Property data type primitives	26
7.4.5 Property unit type primitives	27
7.4.6 Property action primitives	27
7.4.7 Object types	27
8 Object schema	27
8.1 Descriptive methodology	27
8.2 Overview	28
8.3 Base objects	28
8.3.1 General	28
8.3.2 Control objects	29
8.3.3 Sensor objects.....	30
8.3.4 Actuator objects	30
8.4 Data type primitives.....	30

9 Overview of application object binding map schema	31
Annex A (informative) Example of a lighting application interoperability specification	32
Annex B (normative) Base object schema definitions	42
Annex C (informative) Base object schema extension examples	53
Annex D (informative) Notes on interoperability	57
Bibliography.....	59
Figure 1 – Lighting application in (a) a shared memory system, (b) a command/response system and (c) an interoperating system.....	8
Figure 2 – Application interoperability model.....	18
Figure 3 – Binding map example.....	20
Figure 4 – Event bus example.....	22
Figure 5 – Interoperable system taxonomy.....	23
Figure 6 – Object schema structure	29
Figure A.1 – Lighting application.....	32
Figure A.2 – LightSwitch object.....	33
Figure A.3 – LightLamp object	34
Figure A.4 – System A lighting example diagram	35
Figure A.5 – Functional block diagram for FB switching sensor basic.....	35
Figure A.6 – Functional block diagram for FB light switching actuator basic.....	36
Figure A.7 – System B UPnP LightLamp device	37
Figure A.8 – UPnP InterWorking function system	38
Figure A.9 – Functional mapping of SwitchPower service to the LightLamp.....	39
Figure A.10 – System B function mapping table	40
Figure A.11 – Interoperability domain (ID) work flow	41
Table 1 – Application domain list	24
Table 2 – Property structure	26
Table 3 – Property unit type primitives	27
Table D.1 – Terminology mapping table	57
