

ISO 11929-3:2019 (E)

Determination of the characteristic limits (decision threshold, detection limit and limits of the coverage interval) for measurements of ionizing radiation — Fundamentals and application — Part 3: Applications to unfolding methods

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Quantities and symbols
5	Evaluation of a measurement using unfolding methods
5.1	General aspects
5.2	Models of unfolding and general uncertainty evaluation
5.3	Unfolding as a sub-model
5.4	Input quantities and their uncertainties
5.5	Parameters of unfolding
5.6	Procedure for unfolding
5.7	Modification for Poisson distributed count numbers for unfolding
5.8	Evaluation of the primary results and their associated standard uncertainties
5.9	Standard uncertainty as a function of an assumed true value of the measurand
5.10	Decision threshold, detection limit and assessments
5.10.1	Specifications
5.10.2	Decision threshold
5.10.3	Detection limit
5.10.4	Assessments
5.11	Coverage interval and the best estimate and its associated standard uncertainty
5.11.1	General aspects
5.11.2	The probabilistically symmetric coverage interval
5.11.3	The shortest coverage interval
5.12	Documentation
Annex A	(informative) Correlations and covariances
A.1	Definitions
A.2	Calculation of covariances
A.3	Example
A.4	Rules for covariances
A.5	Uncertainty propagation and linear transformations
Annex B	(informative) Spectrum unfolding in nuclear spectrometric measurement
B.1	General aspects
B.2	Gamma-ray spectrometry — Evaluation of a single peak by linear background subtraction
B.3	Gamma-ray spectrometry — Fitting a single peak
B.3.1	General aspects
B.3.2	Model consideration
B.3.3	Uncertainties of input quantities
B.3.4	Evaluation of the primary result and its associated standard uncertainty
B.3.5	Standard uncertainty as a function of an assumed true value of the measurand
B.4	Gamma-ray spectrometry — Fitting double peaks
B.5	Gamma-ray spectrometry — Determine activity from several lines of a single nuclide

- B.5.1** **General aspects**
- B.5.2** **Model of evaluation**
- B.5.3** **Uncertainties of input quantities**
- B.5.4** **Evaluation**
- B.5.5** **Standard uncertainty as a function of an assumed true value of the measurand**
- B.6** **Extending applications in gamma-ray spectrometric measurements**
- B.7** **Application to alpha-spectrometry**
- B.8** **Unfolding in multivariate measurements of ^{89}Sr and ^{90}Sr activities**
