ISO 11665-1:2019 (E)

Measurement of radioactivity in the environment — Air: radon-222 — Part 1: Origins of radon and its short-lived decay products and associated measurement methods

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms, definitions and symbols

3.1 Terms and definitions
3.2 Symbols

4 Principle

5 Equipment

6 Sampling

6.1 General
6.2 Sampling objective
6.3 Sampling characteristics
6.4 Sampling conditions
6.4.1 Installation of sampling device
6.4.1.1 Sampling outside a building
6.4.1.2 Sampling inside a building
6.4.2 Sampling duration
6.4.3 Volume of air sampled

7 Detection

7.1 Silver-activated zinc sulphide ZnS(Ag) scintillation
7.2 Gamma-ray spectrometry
7.3 Liquid scintillation
7.4 Air ionization
7.5 Semi-conductor (alpha detection)
7.6 Solid-state nuclear track detectors (SSNTD)
7.7 Discharge of polarised surface inside an ionization chamber

8 Measurement

8.1 Methods
8.2 Influence quantities
8.3 Calibration
8.4 Quality control

9 Expression of results

10 Test report

Annex A (informative) Radon and its decay products — General information

A.1 Radon isotopes
A.2 Changes in radon activity concentration
A.2.1 In the soil
A.2.2 At the soil-atmosphere interface
A.2.3 In the atmosphere

A.2.4 In buildings
A.3 Short-lived radon-222 decay products

Annex B (informative) Example of results of spot, integrated and continuous measurements of radon-222 activity concentration

Annex C (informative) Example of a test report
