ISO/IEC TR 15067-3-8:2020-09 (E)

Information technology - Home Electronic System (HES) application model - Part 3-8: GridWise transactive energy framework

Contents

Page

FOREWORD 5
INTRODUCTION 7
1 Scope 10
2 Normative references 10
3 Terms and definitions 10
4 Abbreviated terms 14
5 Context setting 15
5.1 Context for transactive issues 15
5.2 Report contents and organization 16
5.3 The problem 16
5.4 Time scales 18
5.5 Economic/market context 19
5.6 Grid control systems context 20
6 Transactive energy 22
6.1 Transition from central power generation 22
6.2 Transactive energy definition 23
6.3 Transactive energy attributes 23
6.4 Transactive energy principles 24
6.5 Evolution of the grid and its effects on transactive energy 25
6.6 Strata of transactive energy 26
7 Framework 27
7.1 The elements of transactive energy 27
7.2 Policy and market design 28
7.3 Business models and value realization 32
7.3.1 Overview 32
7.3.2 Overview of DER services and technical capabilities 33
7.3.3 DER services and values recognized today 35
7.3.4 DER values not yet recognized and quantified 39
7.3.5 Transactive markets and peer-to-peer transactions 42
7.3.6 Distribution system operator 42
7.3.7 Distribution system operator models 42
7.3.8 Summary: redefining the value of the grid 44
7.4 Conceptual architecture guidelines 44
7.4.1 Creating a conceptual architecture 44
7.4.2 Guiding architectural principles 45
7.4.3 Scope of the conceptual architecture for transactive energy 46
7.4.4 Organizing paradigms 47
7.5 Cyber-physical infrastructure 50
7.5.1 Two cyber-physical networks 50
7.5.2 Understanding the electricity grid 50
7.5.3 Hierarchy of node levels 53
7.5.4 Node characteristics and responsibilities 54
7.5.5 Transaction train 55
Annex A (informative) Case studies 58
A.1 Use of case study template 58

A.2 Case study template 58
A.2.1 Title of the case study 58
A.2.2 Case study characteristics and objectives 58
A.2.3 Transactive energy attributes 58
A.2.4 Participating agencies and organizations 60
A.2.5 References for case study 60
Annex B (informative) Pacific Northwest Smart Grid Demonstration 61
B.1 Project characteristics and objectives 61
B.2 Transactive energy attributes 61
B.2.1 Architecture 61
B.2.2 Extent 62
B.2.3 Transacting parties 62
B.2.4 Transaction 62
B.2.5 Transacted commodities 62
B.2.6 Temporal variability 63
B.2.7 Interoperability 63
B.2.8 Value discovery mechanisms 63
B.2.9 Value assignment 63
B.2.10 Alignment of objectives 64
B.2.11 Stability assurance 64
B.3 Participating agencies and organizations 64
B.4 References for case study 64
Annex C (informative) American Electric Power gridSMART® smart grid demonstration 65
C.1 Project characteristics and objectives 65
C.2 Transactive energy attributes 65
C.2.1 Architecture 65
C.2.2 Extent 65
C.2.3 Transacting parties 65
C.2.4 Transactions 65
C.2.5 Transacted commodities 66
C.2.6 Temporal variability 66
C.2.7 Interoperability 66
C.2.8 Value discovery mechanisms 66
C.2.9 Value assignment 67
C.2.10 Alignment of objectives 67
C.2.11 Stability assurance 67
C.3 Participating agencies and organizations 67
C.4 References for case study 68
