Neutron reference radiations fields - Part 1: Characteristics and methods of production

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Broad spectrum neutron reference radiation fields produced with radionuclide sources 3
4.1 Overview 3
4.2 Types of calibration sources 3
4.3 Source shape and encapsulation 4
4.4 Photon component of the neutron field 4
4.5 Energy distribution of neutron source emission rate 5
4.6 Neutron fluence rate produced by a source 5
4.7 Determination of the neutron source emission rate 6
4.8 Irradiation facility 6

5 Reference fields for the determination of the response of neutronmeasuring devices as a function of neutron energy 7
5.1 Overview 7
5.2 General properties 7
5.3 Neutron reference radiation fields produced with particle accelerators 8
5.3.1 General requirements 8
5.3.2 Energy of charged particles 8
5.3.3 Neutron spectrum 9
5.3.4 Parasitic and scattered neutron background 9
5.3.5 Neutron fluence measurement and monitoring 10
5.4 Neutron reference radiation fields produced with reactors 10
5.4.1 General requirements 10
5.4.2 Production and monitoring 10

6 Thermal neutron reference radiation fields 10

Annex A (informative) Tabular and graphical representation of the neutron spectra for radionuclide sources 12

Annex B (normative) Energy distribution of the neutron emission rate for the 252Cf source 14

Annex C (informative) Characteristics of D2O-moderated 252Cf sources 16

Annex D (informative) Characteristics of 241Am-Be sources 20

Annex E (informative) Angular source emission rate characteristics of radionuclide neutron sources 24

Annex F (normative) Conventional thermalneutron fluence rate 27
