

ISO/IEC 15067-5:2026-04 (E)

Information technology - Home Electronic System (HES) application model - Part 5: A safety framework and guidelines for control and data communication messages

Contents	Page
FOREWORD.....	2
INTRODUCTION.....	4
1 Scope.....	7
2 Normative references.....	7
3 Terms, definitions, and abbreviated terms.....	7
3.1 Terms and definitions.....	7
3.2 Abbreviated terms.....	9
4 Conformance.....	9
5 Enhancing safety for users of networked products.....	9
5.1 Objectives of safety protection.....	9
5.2 Messages creating unsafe conditions.....	10
5.3 Sources of unsafe message.....	10
5.4 Protection from unsafe messages.....	10
5.5 Safety protection benefits.....	11
6 General guidelines for product safety.....	11
6.1 Combining message and product safety.....	11
6.2 Design guidelines for product safety.....	12
6.3 Installation guidelines for product safety.....	12
7 Mitigating safety risks for networked products.....	12
7.1 Screening messages that cause unsafe options.....	12
7.2 Message types and risks.....	13
7.3 Safety and connectivity.....	13
7.3.1 Safety for hcs connectivity.....	13
7.3.2 Additional safety features for HES connectivity.....	14
7.4 Hazard severity for products.....	14
7.5 Factors affecting safety.....	15
7.6 Requirements for enhancing safe product operation.....	16
Annex A (informative) Examples of unsafe messages.....	17
A.1 Unsafe messages.....	17
A.2 Cook top.....	17
A.3 Lighting.....	17
A.4 Robotic cleaner.....	17
Bibliography.....	18
Table 1 – Factors affecting the operational safety of relatively safe products.....	15
Table 2 – Factors affecting the operational safety of relatively unsafe products.....	16
