Determination of the detection limit and decision threshold for ionizing radiation measurements - Part 5: Fundamentals and applications to counting measurements on filters during accumulation of radioactive material

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Quantities and symbols	3
5	Statistical values and confidence interval	5
5.1	Principles	5
5.1.1	General aspects	5
5.1.2	Model	6
5.2	Decision threshold	9
5.2.1	Decision threshold for the measurement of concentration of radioactivity	9
5.2.2	Decision threshold for the measurement of the variation of the concentration of radioactivity	9
5.3	Detection limit	10
5.3.1	General	10
5.3.2	Detection limit for the measurement of the concentration of radioactivity	10
5.3.3	Detection limit for the measurement of the variation of the concentration of radioactivity	10
5.4	Confidence limits	10
6.1	Specific values	11
6.2	Assessment of a measuring method	11
6.3	Assessment of measured results	11
6.4	Documentation	11
7	Values of the distribution function of the standardized normal distribution	12
