Structural steels - Part 6: Technical delivery conditions for seismic-proof improved structural steels for building

Contents		Page
Foreword		iv
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Classification and designation	2
4.1	Classification	2
4.2	Designation (grades and qualities)	2
5	Information to be supplied by purchaser	2
5.1	Mandatory information	2
5.2	Options	2
6	Requirements	2
6.1	Steel-making process	2
6.2	Delivery condition	3
6.3	Chemical composition	3
6.3.1	Heat analysis	3
6.3.2	Product analysis	3
6.3.3	Carbon equivalent value (CEV) or parameter crack measurement (PCM)	4
6.3.4	Carbon equivalent value (CEV) or parameter crack measurement (PCM) for steel products by thermomechanical controlled process	5
6.4	Mechanical properties	6
6.4.1	Tensile properties	6
6.4.2	Charpy V-notch impacts test	6
6.4.3	Through thickness characteristics	6
6.5	Surface conditions	7
6.6	Internal soundness	7
6.7	Dimensions, tolerances on dimensions and shape, mass	8
7	Inspection	9
8	Sampling -- Frequency of testing	9
8.1	Verification	9
8.2	Test units	9
8.2.1	Tensile tests	9
8.2.2	Impact tests	9
8.2.3	Through-thickness characteristics test	10
9	Test methods	10
10	Marking	10
Annex A (normative) Shapes and dimensions tolerances of H-sections		11
Annex B (informative) The formula of carbon equivalent and the maximum carbon equivalent value		15
Bibliography		17
