DIN EN 12259-14:2020-07 (E)

Fixed firefighting systems - Components for sprinkler and water spray systems - Part 14: Sprinklers for residential applications

Contents

Page

European foreword 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Construction and performance 10
4.1 General 10
4.2 Dimensions and pressure rating 10
4.3 Nominal operating temperature 11
4.4 Operating temperatures 11
4.5 Water flow and distribution 12
4.6 Function 13
4.7 Fire Test 13
4.8 Strength of sprinkler body and deflector 13
4.9 Strength of release element 14

Figure 1 -- Graph of service load and bulb strength distribution curves 14
4.10 Leak resistance and hydrostatic strength 15
4.11 Heat exposure 15
4.12 Corrosion 15
4.13 Water hammer 16
4.14 Thermal response 16
4.15 Resistance to vibration 16
4.16 Resistance to impact 16
4.17 Resistance to low temperature 16
4.18 Resistance to heat 16
4.19 Test conditions 16

5 Marking 17
5.1 General 17
5.2 Identification number 17
5.3 Nominal operating temperature and year of manufacture 17
5.4 Manufacturing location 17
5.5 Heat sensitive element supplier 17
5.6 Protective covers 17
5.7 Sidewall sprinklers 18
5.8 Concealed sprinklers 18
5.9 Removable recessed housing 18

6 Instruction charts 18
6.1 General 18
6.2 Installation Instructions 18

Annex A(normative) Conditions for tests 20

Annex B(normative) Water flow test 21

Figure B.1-- Water flow test apparatus 22

Annex C(normative) Water distribution test 23

C.1 Water distribution test - Horizontal surface 23
C.1.1 General 23
C.1.2 Upright, pendant, flush, recessed and concealed sprinklers 23

Figure C.1 -- Horizontal surface water collection for upright and pendant sprinklers 24
C.1.3 Sidewall Sprinklers 24

Figure C.2 -- Horizontal surface water collection for sidewall sprinklers 25
C.2 Water distribution test - vertical surface 26
C.2.1 Test method 26

Figure C.3 -- Vertical water collection 27
C.3 Water impingement test 28

Annex D(normative) Fire test 29

D.1 Extent of testing 29

Figure D.1 -- Fire test arrangement - pendant, upright, flush, recessed pendant, and concealed sprinklers 30

Figure D.2 -- Fire test arrangement - sidewall sprinklers, test arrangement No. 1 31

Figure D.3 -- Fire test arrangement - sidewall sprinklers, test arrangement No. 2 32
D.2 Test arrangement 33
D.2.1 Test room 33

Figure D.4 -- Corner fire test ignition and fuel package 34

Table D.1 -- Plywood burning characteristics 35
D.2.2 Fire source 35

Table D.2 -- Polyether foam burning characteristics 36
D.2.3 Sprinkler installation 36
D.3 Test method 37
D.4 Supplementary test 38

Annex E(normative) Function test 39

E.1 Function test 39
E.2 Verification function test 39

Figure E.1 -- Example of functional test oven 40

Annex F(normative) Strength of sprinkler body and deflector 41

F.1 Strength of sprinkler bod 41

Figure F.1 -- Example of a tensile/compression test machine 41
F.2 Flow endurance test 42
F.3 Deflector strength test 42

Annex G(normative) Strength of release elements test 43

G.1 Glass bulbs 43
G.2 Fusible links 45

Annex H(normative) Leak resistance tests 46

H.1 Leak Test 46
H.2 Hydrostatic Strength Test 46

Table H.1 -- Test pressures for the leakage and hydrostatic tests 46

Annex I(normative) Heat exposure 47

I.1 High temperature test 47

Table I.1 -- High temperature test conditions 47
I.2 Additional testing of glass bulb sprinklers 47
I.3 Additional testing of residential sprinklers using o-rings 48

Annex J(normative) Glass bulb sprinkler thermal shock test 49

Annex K(normative) Exposure and corrosion tests 50

K.1 Stress corrosion 50
K.1.1 Sample preparation 50
K.1.2 Apparatus 50
K.1.3 Procedure 50
K.2 Sulphur dioxide corrosion 50
K.2.1 Reagents for apparatus of 5 l volume 50
K.2.2 Apparatus 51
K.2.3 Procedure 51

Figure K.1 -- Typical vessel for sulphur dioxide corrosion test 52
K.3 Salt mist corrosion 52
K.3.1 Reagents 52
K.3.2 Apparatus 52
K.3.3 Procedure 52
K.4 Moist Air 53
K.4.1 Performance criteria 53
K.4.2 Procedure 53

Annex L(normative) Water hammer test 54

Annex M(normative) Thermal response test 55

M.1 Oven heat test 55
M.2 Room heat test 56
M.2.1 Flush, recessed or concealed sprinklers 56
M.2.2 Sprinkler location and orientation 56
M.2.3 Room dimensions and water supply 57
M.2.4 Fire source and distance to sprinkler 57

Figure M.1 -- Typical sand burner apparatus 58

Figure M.2 -- Plan view of room heat test for residential sprinklers 59

Annex N(normative) Vibration test 60

N.1 Sample preparation and performance criteria 60
N.2 Procedure 60

Table N.1 -- Vibration test 60

Annex O(normative) Impact test 61

Annex P(normative) Resistance to low temperature test 62

Annex Q(normative) Resistance to high temperature test 63
