Fire protection - Automatic sprinkler systems - Part 1: Requirements and test methods for sprinklers

Contents		Page
Foreword		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
3.1	General	1
3.2	Types of sprinkler according to type of heat-responsive element	2
3.3	Types of sprinkler according to type of water distribution	3
3.4	Types of sprinkler according to position	3
3.5	Special types of sprinkler	3
3.6	Types of sprinkler according to sprinkler sensitivity	4
4	Product consistency	5
4.1	Quality control programme	5
4.2	Leak resistance testing	5
5	Product assembly	6
6	Requirements	6
6.1	Dimensions	6
6.2	Nominal operating temperature (see 7.7.1)	6
6.3	Operating temperature (see 7.7.1)	7
6.4	Water flow and distribution	8
6.5	Function (see 7.6)	8
6.6	Service load and strength of sprinkler body (see 7.4)	8
6.7	Strength of heat-responsive element (see 7.10)	9
6.8	Leak resistance and hydrostatic strength (see 7.5)	10
6.9	Heat exposure (see 7.8)	10
6.10	Thermal shock (see 7.9)	10
6.11	Corrosion	10
6.12	Coated sprinklers (see 7.8.3)	11
6.13	Water hammer (see 7.16)	11
6.14	Dynamic heating (see 7.7.2)	11
6.15	Resistance to heat (see 7.15)	12
6.16	Resistance to vibration (see 7.17)	12
6.17	Resistance to impact (see 7.18)	12
6.18	Crib fire performance (see 7.19)	12
6.19	Lateral discharge (see 7.20)	12
6.20	Thirty-day leakage resistance (see 7.21)	12
6.21	Vacuum resistance (see 7.22)	13
6.22	Water shield angle of protection (see 7.23)	13
6.23	Water shield rotation (see 7.24)	13
6.24	Thermal response of concealed, flush and recessed sprinklers (see 7.25)	13
6.25	Operational cycling of on/off sprinklers (see 7.26)	14
6.26	Piled stock fire test for on/off sprinklers (see 7.27)	15
6.27	High temperature exposure for on/off sprinklers (see 7.28)	15
6.28	Resistance to low temperatures (see 7.29)	15
7	Test methods	15

7.1	General	15
7.2	Preliminary examination	15
7.3	Visual examination	16
7.4	Service load and body strength test (see 6.6)	18
7.5	Leak resistance and hydrostatic strength test (see 6.8)	18
7.6	Functional test (see 6.5.1)	18
7.7	Operating temperature test (see 6.3)	20
7.8	Heat exposure test (see 6.9)	26
7.9	Thermal shock test for glass bulb sprinklers (see 6.10)	27
7.10	Strength test for release elements (see 6.7)	27
7.11	Water flow test (see 6.4.1)	27
7.12	Water distribution tests (see 6.4.2)	28
7.13	Corrosion tests (see 6.11)	37
7.14	Tests for sprinkler coatings	39
7.15	Heat-resistance test (see 6.15)	39
7.16	Water-hammer test (see 6.13)	39
7.17	Vibration test (see 6.16)	39
7.18	Impact test (see 6.17)	40
7.19	Crib fire test (see 6.18)	42
7.20	Lateral discharge test (see 6.19)	46
7.21	Thirty-day leakage test (see 6.20)	46
7.22	Vacuum test (see 6.21)	46
7.23	Water shield angle of protection (see 6.22)	46
7.24	Water shield rotation test (see 6.23)	46
7.25	Thermal response test for concealed, flush and recessed sprinklers (see 6.24)	47
7.26	Operational cycling of an on/off sprinkler (see 6.25)	51
7.27	Piled-stock fire test for on/off sprinklers (see 6.5.3 and 6.26)	52
7.28	High temperature exposure for on/off sprinklers (see 6.27)	55
7.29	Freezer test (see 6.28)	55
8	Marking	55
8.1	Sprinklers	55
8.2	Sprinkler housings and concealed sprinkler cover plates	56
Annex A (informative) Analysis of the strength test for release elements		57
Annex B (informative) Tolerance limit calculations method		58
Annex C (informative) Sprinkler response -- Sample calculations		61
Annex D (normative) Tolerances		63
Annex E (informative) Thermal response -- Sample calculations		64
