DIN EN 203-2-3:2015-04 (E)

Gas heated catering equipment - Part 2-3: Specific requirements - Boiling pans

Contents

Page

Foreword 5

1 Scope 7

2 Normative references 7

3 Terms and definitions 7
3.1 Terminology referring to gases and pressures 7
3.2 General terminology referring to appliance design 7
3.3 Terminology referring to appliance operation 7

4 Classification 8

5 Constructional requirements 8
5.1 General 8
5.1.1 Conversion to different gases 8
5.1.2 Materials and methods of construction 8
5.1.3 Use, cleaning and maintenance 8
5.1.4 Gas connections 8
5.1.5 Soundness 9
5.1.6 Supply of combustion air and evacuation of combustion products 9
5.1.7 Flame visibility 9
5.1.8 Electrical safety 9
5.1.9 Construction requirements for gas cylinder compartment 9
5.1.101 Flexible hoses and/or rotating connections 9
5.2 Particular requirements for components in the gas circuit 10
5.2.1 General 10
5.2.2 Gas rate control and shut-off device 10
5.2.3 Auxiliary equipment 10
5.2.4 Burners 10
5.2.5 Gas rate adjusters 11
5.3 Particular requirements 11
5.3.1 Food spillage 11
5.3.2 Stability and mechanical safety 11
5.3.3 Safety from fire risk 12
5.3.4 Appliances connected to a potable water supply 12
5.3.101 Filling level 12

6 Performance requirements 12
6.1 Soundness 12
6.1.1 Soundness of the gas circuit 12
6.1.2 Soundness of combustion product circuit of type B appliances 12
6.1.101 Soundness of the evacuation circuit of combustion product of tilting boiling pans (For type B appliances) 12
6.2 Obtaining the gas rate 13
6.2.1 Nominal heat input (Qn) 13
6.2.2 Full calorific rate 13
6.2.3 Reduced heat input 13
6.2.4 Ignition burner heat input 13
6.3 Safety of operation 13
6.3.1 Burners 13
6.3.2 Temperature limits 13

6.3.3 Ignition - cross-lighting - flame stability 13
6.3.4 Combustion products safety devices for type B11BS appliances 13
6.3.5 Pre-purge 14
6.4 Influence of burners on each other 14
6.5 Auxiliary equipment 14
6.5.1 Flame shut off device 14
6.5.2 Ignition device 14
6.6 Air proving device 14
6.6.1 General 14
6.6.2 Supervision of the combustion air or combustion products rate 14
6.6.3 Supervision of the combustion air pressure or combustion products pressure 14
6.6.4 Air/gas ratio controls 14
6.7 Combustion 14
6.7.1 All appliances (in calm air) 14
6.7.2 Special conditions 14
6.8 Particular requirements 14
6.8.1 Stability and mechanical safety 14
6.8.2 Pressurized parts 14
6.9 Auxiliary energy 15
6.9.1 General 15
6.9.2 Electrical energy fluctuation 15
6.9.3 Other auxiliary energy 15
6.10 Rational use of energy 15
6.11 Operating requirements - Temperature of the LPG cylinder and its compartment 15
6.11.1 Temperature of the walls of the compartment 15
6.11.2 Temperature of the LPG cylinder 15

7 Test conditions 16
7.1 General 16
7.1.1 Characteristics of the test gases 16
7.1.2 Requirements for making up test gases 16
7.1.3 Test room 16
7.1.4 Preparation of the appliance 16
7.1.5 Practical method of test 16
7.1.6 Test pressures 16
7.1.7 Carrying out the tests 16
7.2 Soundness 16
7.2.1 Soundness of the gas circuit 16
7.2.2 Soundness of the combustion circuit and correct evacuation of the combustion products for type B appliances 16
7.2.101 Soundness of gas circuits in appliances with flexible hoses and/or rotating connections 16
7.2.102 Soundness of the combustion products circuit for tilting pans (for type B appliances only) 17
7.3 Obtaining gas rates 17
7.3.1 General 17
7.3.2 Nominal heat input 17
7.3.3 Full rate 17
7.3.4 Reduced rate 17
7.4 Operational safety 17
7.4.1 Burners 17
7.4.2 Temperature limits 17
7.4.3 Ignition - cross- lighting - flame stability 17
7.5 Auxiliary equipment 17
7.5.1 Flame shut off device 17
7.5.2 Ignition device 17
7.6 Combustion 18
7.6.1 General 18
7.6.2 Tests carried out under normal conditions 18
7.6.3 Specific test for type B appliances 18
7.6.4 Test with sooting limit gas 18
7.7 Air-proving device 18
7.7.1 General 18

7.7.2 Supervision of the combustion air or the combustion products rate 18
7.7.3 Supervision of the combustion air or the combustion products pressure 18
7.8 Special tests 18
7.8.101 Stability and mechanical safety 18
7.8.1 Pressurized parts 19
7.8.2 Lack of heat bearing fluid 19
7.8.3 Stability and mechanical safety of tilting parts 19
7.9 Test method - Overheating of the LPG cylinder and its compartment 19
7.101 Rational use of energy 19

8 Designation 20

9 Marking and instructions 20
9.1 General 20
9.2 Marking on the appliance 20
9.2.1 Data plates and labels 20
9.2.2 Other marking on the appliance 21
9.3 Instructions 21
9.3.1 General 21
9.3.2 Instructions for use and maintenance 21
9.3.3 Instructions for installation and adjustment 21
9.3.4 Instructions for conversion to different gases 21
9.4 Packaging 21

requirements or other provisions of EU Directives 22
