

ISO 10840:2008-06 (E)

Plastics - Guidance for the use of standard fire tests

Contents

Page

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Enclosure fire scenarios	2
4.1 General	2
4.2 Initiation and early growth	3
4.3 Development of fire	3
4.4 Fully developed fire	4
4.5 Decay	4
5 Categories of fire test	4
5.1 Material characterization tests	4
5.2 Quality-control tests	4
5.3 Pre-selection tests	5
5.4 End-product tests	6
6 Important considerations in the fire testing of plastics materials and products	6
6.1 Influence of the chemical or physical nature of the test specimen	6
6.2 Thermal-decomposition products	6
6.3 Problems posed by specimen decomposition	7
6.4 Health, safety and local environmental considerations	7
6.5 Specimen size and geometry	7
6.6 Characteristics of ignition sources	8
6.7 Sample and test specimen preparation and conditioning	8
6.8 Operating procedures in the event of specimen collapse or deformation	8
6.9 Complications caused by melting effects in thermoplastics	9
6.10 Advantages and disadvantages of scale in fire tests	9
6.11 Influence of test apparatus design on the applicability of test data	11
6.12 Calibration of the test apparatus and attainable precision	11
6.13 Uncertainty associated with fire test measurements	11
7 Potentially problematical specimen behaviour	12
7.1 Tests developed for materials other than plastics	12
7.2 Shrinking	12
7.3 Bubbling	12
7.4 Intumescence	12
7.5 Extinguishing of pilot flames by highly flame retarded plastics	12
7.6 Slumping of thermoplastic sheets	13
7.7 Detection of flaming drips	13
7.8 Edge effects	13
7.9 Profiled products	13
Annex A (normative) End-use-relevant preparation of test specimens	14
Annex B (informative) Environmental-impact assessment	23
Bibliography	25
