ISO 15063:2011-09 (E)

Plastics - Polyols for use in the production of polyurethanes - Determination of hydroxyl number by NIR spectroscopy

Contents

Page

Foreword ... iv

Introduction ... v

1 Scope ... 1

2 Normative references ... 1

3 Terms and definitions ... 1

4 Principle ... 1
4.1 General ... 1
4.2 Procedure employed ... 2
4.3 Limitations ... 2

5 Instrumentation ... 2
5.1 General ... 2
5.2 Light source and detector ... 3
5.3 Spectrometer ... 3
5.4 Sampling system ... 3
5.5 Software ... 3

6 Developing a calibration model ... 3
6.1 Selection of calibration materials ... 3
6.2 Reference method and reference values ... 4
6.3 Determining wavelength regions and pathlength ... 4
6.4 Reduction of sources of spectral variation ... 4
6.5 Multivariate mathematical treatments ... 5
6.6 Evaluating calibration models ... 5

7 Validation of a multivariate calibration model ... 5

8 Calibration transfer ... 6

9 Calibration quality control ... 6

10 Procedure ... 6
10.1 General ... 6
10.2 Calibration curve ... 6
10.3 Measurement ... 7
10.4 Illustrative results ... 7

11 Precision of NIR estimated values ... 7

12 Test report ... 7

Annex A (informative) **Illustrative results** ... 8

Annex B (informative) **NIR spectral measurements** ... 15

Annex C (informative) **Spectrometers** ... 16

Annex D (informative) **Sampling systems** ... 17

Annex E (informative) **Selection of calibration materials** ... 18

Annex F (informative) **Multivariate analysis** ... 20

Annex G (informative) **Statistical tools used to optimize calibration models** ... 22

Annex H (informative) **Sources of calibration and analysis error** ... 25

Annex I (informative) **Monitoring the performance of the instrument and calibration model** ... 26

Bibliography ... 27
