ISO 19927:2018 (E)

Fibre-reinforced plastic composites — Determination of interlaminar strength and modulus by double beam shear test

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Apparatus

6 Test specimens

6.1 Shape and dimensions
6.1.1 Preferred specimen size
6.1.2 Alternative specimen size
6.2 Preparation of specimens
6.2.1 General
6.2.2 Machining the test specimens
6.3 Checking the test specimens

7 Number of test specimens

8 Conditioning

9 Procedure

9.1 Test conditions
9.2 Specimen dimensions
9.3 Testing speed
9.4 Data collection
9.5 Failure mode acceptance
9.6 Critical load
9.7 Slope of load-displacement curve

10 Calculation and expression of results

10.1 Interlaminar shear strength
10.2 Interlaminar shear modulus

11 Precision

12 Test report

Annex A (informative) Additional details relating to calculation of shear modulus, G13

A.1 General
A.2 Application of the Castigliano's 2nd theorem
A.3 Application of the unit load (F0) method
A.4 Application of the Castigliano's 2nd theorem

Annex B (informative) Interlaboratory study
