

DIN EN ISO 17556:2019-09 (E)

Plastics - Determination of the ultimate aerobic biodegradability of plastic materials in soil by measuring the oxygen demand in a respirometer or the amount of carbon dioxide evolved (ISO 17556:2019)

Contents	Page
European foreword.....	4
Foreword	5
Introduction	6
1 Scope.....	7
2 Normative references.....	7
3 Terms and definitions	7
4 Principle	9
5 Test environment.....	10
6 Materials.....	10
7 Apparatus.....	10
8 Procedure.....	10
8.1 Preparation of the test material	10
8.2 Preparation of the reference material	11
8.3 Preparation of the test soil	11
8.3.1 Collection and sieving of soil.....	11
8.3.2 Preparation of standard soil	12
8.3.3 Measurement of soil characteristics	13
8.3.4 Adjustment of the water content and the pH of the soil.....	13
8.3.5 Handling and storage of the soil	13
8.4 Start-up and execution of the test	13
9 Calculation and expression of results.....	15
9.1 Calculation.....	15
9.1.1 Percentage biodegradation from oxygen consumption values.....	15
9.1.2 Percentage biodegradation from carbon dioxide evolved.....	15
9.2 Expression and interpretation of results	16
10 Validity of results	16
11 Test report.....	16
Annex A (informative) Principle of a manometric respirometer (example).....	18
Annex B (informative) Example of a system for measuring the amount of carbon dioxide evolved.....	19
Annex C (informative) Examples of methods for the determination of evolved carbon dioxide.....	20
C.1 CO ₂ determination by DIC measurement.....	20
C.2 Titrimetric method using a barium hydroxide solution.....	20
Annex D (informative) Theoretical oxygen demand (ThOD)	22
D.1 Calculation of ThOD.....	22
D.2 Example: poly-(R)-3-hydroxybutyrate [(R)-PHB]	22
D.3 Example: blend of polyethylene/starch/glycerol	22

Annex E (informative) Example of a determination of the amount and the molecular mass of water-insoluble polymer remaining at the end of a biodegradation test	23
Annex F (informative) Examples of long-term tests	24
F.1 Evolution of the biodegradation of cellulose, wheat gluten, flax fibres and broom fibres in soil	24
F.2 Evolution of the biodegradation of cellulose, birch leaves, oak leaves and pine needles in soil	25
F.3 Evolution of the biodegradation of cellulose and straw	26
Annex G (informative) Interlaboratory test.....	28
Bibliography	32
