ISO 10093:2020 (E)

Plastics — Fire tests — Standard ignition sources

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Ignition processes

5 Characteristics of ignition sources

6 General principles

6.1 Flaming ignition sources
6.1.1 Diffusion flame ignition sources
6.1.2 Premixed flame sources
6.1.3 Issues associated with flaming ignition sources
6.2 Non-flaming and flaming ignition sources

7 Smouldering (cigarette) ignition sources

7.1 Traditional cigarettes
7.2 Non-reduced ignition propensity cigarettes

8 Non-flaming electrical ignition sources

8.1 Glow-wire ignition
8.2 Hot-wire ignition

9 Radiant ignition sources

9.1 Conical radiant ignition sources
9.1.1 General
9.1.2 Cone calorimeter ignition source
9.1.3 Smoke chamber conical heater
9.1.4 Ignition source from periodic flaming ignition test
9.2 Other radiant ignition sources
9.2.1 Glowbars ignition source
9.2.2 Lateral ignition and flame spread test (LIFT) radiant panel heater.
9.2.3 Setchkin ignition

10 Infrared heating system

11 Diffusion flame ignition

11.1 Needle flame ignition
11.2 Burning match
11.3 Burners generating 50 W or 500 W flames

12 Premixed burners

12.1 Premixed burner for 1 kW flame
12.2 Burners for vertical cable tray tests
12.2.1 Venturi burners for 20 kW vertical cable tray tests
12.2.2 Burner for vertical riser cable tests
12.3 Burner for large scale horizontal tests
12.4 Burners for room corner tests

12.4.1 Burner for ISO 9705-1
12.4.2 Alternate burner for room corner test
12.5 Burners for individual product heat release tests
12.5.1 Burner for single fuel package calorimeter
12.5.2 Square tube propane burner
12.5.3 T-shaped propane burner
12.5.4 Dual T-shaped propane burner

13 Other ignition sources

13.1 Wood cribs
13.2 Paper bags
