Fibre reinforced plastics - Analysis of differences between circular-section tubes and cambered triangular thin-walled tubes in three-point bending tests

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Comparison of existing three-point bending test methods	3
4.1 Principle and existing standards	3
4.2 Specimen requirements	4
4.3 Test apparatus	4
4.4 Experimental conditions	4
4.5 Experimental procedure	5
4.6 Span-thickness ratio (L/h) and span (L)	5
4.7 Bending performance evaluation	6
5 Characteristics of cambered triangular thin-walled tubes	7
6 Considerations for applying existing methods to cambered triangular thin-walled tubes	7
Annex A (informative) Theoretical analysis of the cambered triangle thin-walled tubes	9
Bibliography	14
