ISO/PAS 24499:2024-05 (E)

Method of test for burning velocity measurement of A2L flammable gases

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 General test method 2
4.1 General 2
4.2 Principle of the test method 2

5 Measurement parameters 4
5.1 General 4
5.2 Flame propagation velocity 4
5.3 Flame front area 5
5.4 Cross-sectional area of the flame base 5

6 Test method 5
6.1 General 5
6.2 Gas handling and mixtures preparation 6
6.3 The test tube 7
6.3.1 General 7
6.3.2 Dimensions 8
6.3.3 Position 9
6.3.4 Tube ends 9
6.3.5 Interchangeable damping orifices 9
6.3.6 Flame quenching 10
6.3.7 Tube glass type 10
6.3.8 Tube purging with test mixture 10
6.3.9 Tube etching 10
6.4 Ignition 11
6.4.1 General 11
6.4.2 Ignition type 11
6.4.3 Positioning 11
6.4.4 Electrodes 11
6.4.5 Power supply 11
6.4.6 Ignition time 11
6.5 Flame front visualization 12
6.5.1 General 12
6.5.2 Luminous zone and direct photography 12
6.5.3 Flame emission spectra 12
6.5.4 Acquisition camera 12
6.5.5 Exposure Time 13
6.5.6 Positioning 13
6.5.7 Scaling and optical distortion 13
6.5.8 Resolution of the flame images 14
6.6 Purge, exhaust and gas treatment systems 14
6.7 Test temperature setting 15
6.8 Experimental protocol for mixtures prepared using partial pressure technique 16

7 Evaluation and expression of results 16
7.1 General 16
7.2 Uncertainty 17
7.2.1 Uncertainty in the burning velocity 17
7.2.2 Uncertainty estimation of concentrations 17

8 Safety precautions 17

9 Overview on flame shape, propagation regimes and stability 18

9.1 Flame shape 18
9.2 Flame propagation regimes 19
9.3 Flame stability in tubes 20
9.4 Observations of flames in tubes 21
9.5 Flame quenching in circular tubes 21
9.6 Flame propagation velocity and tube diameter 22
9.7 Flame area calculation 22

Bibliography 24
