ISO 24664:2024-11 (E)

Refrigerating systems and heat pumps - Pressure relief devices and their associated piping - Methods for calculation

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols 3

5 General 4

6 Minimum required discharge capacity for protection of parts of a refrigerating system 5
6.1 General 5
6.2 Excessive pressure caused by heat sources 6
6.2.1 External heat sources 6
6.2.2 Internal heat sources 7
6.3 Excessive pressure caused by compressors 7
6.4 Excessive pressure caused by expansion of trapped liquid 7

7 Discharge capacity of pressure relief devices 8
7.1 General 8
7.2 Discharge capacity of pressure relief valves 8
7.3 Discharge capacity of bursting discs 9

8 Pressure loss in inlet and outlet lines 10
8.1 General 10
8.2 Pressure loss in inlet line 10
8.3 Pressure loss in outlet line 11
8.4 Total pressure loss 12
8.5 Connection of outlets from several pressure relief valves to a common outlet line 12

Annex A (normative) Values of factors and properties of refrigerants 14

Annex B (informative)Calculationofflowareasfornon-flashingandflashingliquids 21

Annex C (informative) Example calculation for sizing pressure relief devices with correspondingpipesandfittings 24

Annex D (informative) Relief valve outlet line when velocity is higher than speed of sound 31
