

# DIN EN 1971-2:2012-02 (E)

Copper and copper alloys - Eddy current test for measuring defects on seamless round copper and copper alloy tubes - Part 2: Test with an internal probe on the inner surface

---

<b>Contents</b>		<b>Page</b>
Foreword .....		3
Introduction .....		4
1	Scope .....	5
2	Normative references .....	5
3	Terms and definitions .....	5
4	General requirements .....	5
4.1	Personnel qualification .....	5
4.2	Condition of tube to be tested .....	5
4.3	Equipment .....	6
5	Reference standard tube .....	6
6	Acceptance criteria .....	7
6.1	Detection of local discontinuities by internal probes systems .....	7
6.2	Detection of non-local discontinuities by internal probes systems with lower detection levels .....	7
6.3	Other test methods .....	8
7	Instrument adjustment .....	8
Bibliography .....		9
