

# DIN EN 14531-6:2009-12 (E)

## Railway applications - Methods for calculation of stopping and slowing distances and immobilisation braking - Part 6: Step by step calculations for train sets or single vehicles

---

<b>Contents</b>		<b>Page</b>
Foreword .....		4
Introduction .....		5
1 Scope .....		6
2 Normative references .....		6
3 Definitions, symbols and abbreviations .....		6
3.1 Terms and definitions .....		6
3.2 Symbols and indices .....		7
4 General algorithms .....		10
4.1 General algorithm to calculate stopping and slowing distances .....		10
4.2 General algorithm to calculate immobilization brake .....		10
5 Stopping and slowing distances calculation .....		10
5.1 Accuracy of input values .....		10
5.2 General characteristics .....		10
5.3 Brake equipment characteristics .....		12
5.4 Initial and operating characteristics .....		23
5.5 Sharing, proportioning of the brake forces - achieved forces .....		25
5.6 Braking force per axle .....		25
5.7 Total force on train level .....		25
5.8 Time step integration loop .....		26
5.9 Other decelerations .....		26
5.10 Time .....		27
5.11 Distance calculations .....		28
5.12 Other calculations .....		29
6 Immobilization brake calculation .....		31
6.1 General .....		31
6.2 General characteristics .....		32
6.3 Characteristics of the immobilization brake equipment .....		32
6.4 Train and operating characteristics .....		32
6.5 Immobilization force provided by each equipment type .....		33
6.6 Immobilization force .....		33
6.7 External forces .....		34
6.8 Final results .....		35
Annex A (normative) Workflow of kinetic and static calculations .....		37
Annex B (informative) Example of time step integration loop .....		40
Annex C (informative) Example of distance and other dynamic calculations .....		41
C.1 Input data .....		41
C.1.1 Mass data .....		41
C.1.2 Wheel data .....		42

C.1.3	Train resistance .....	42
C.1.4	Data for brake equipment types .....	42
C.1.5	Characteristics and settings of the brake equipment .....	44
C.1.6	Initial and final speed .....	44
C.1.7	Gradient .....	44
C.2	Calculation results .....	45
C.2.1	Braking force of single equipments and train resistance .....	45
C.2.2	Total braking force per equipment type and train resistance .....	46
C.2.3	Distances .....	46
C.2.4	Stopping time .....	47
C.2.5	Equivalent response time .....	47
C.2.6	Equivalent deceleration .....	47
C.2.7	Decelerations .....	47
C.2.8	Required adhesion .....	48
<b>Annex D (informative) Example of immobilisation calculations .....</b>		<b>50</b>
D.1	Input data .....	50
D.1.1	Mass data .....	50
D.1.2	Wheel data .....	51
D.1.3	Train resistance .....	51
D.1.4	Wind force on the train .....	51
D.1.5	Data for axle related disc brake equipment .....	51
D.1.6	Gradient .....	52
D.1.7	Available adhesion .....	52
D.1.8	Brake equipment in use .....	52
D.2	Calculation results of the immobilisation calculation .....	52
D.2.1	Immobilisation force .....	52
D.2.2	Immobilisation safety factor .....	53
D.2.3	Required adhesion per axle .....	53
D.2.4	Maximum achievable gradient .....	53
<b>Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EC Directive 2008/27/EC .....</b>		<b>54</b>
<b>Bibliography .....</b>		<b>57</b>
