DIN CEN/TR 17039:2018-08 (E)

Railway applications - Technical Report about the revision of EN 14363; English version CEN/TR 17039:2017

Contents

Page

European foreword 5

1 Scope 6

2 Members of the different drafting groups for the revision of EN 14363 6

3 Changes to the scope 7
3.1 Scope extension 7
3.2 Limitation 7
3.3 Clarification 8
3.4 Shifted to other sections 8

4 Fault modes 8
4.1 What was changed? 8
4.2 Why was it changed? 9
4.3 Comments raised in the CRM process and how they were addressed 9

5 Load conditions for testing 9

6 First stage assessment 10
6.1 General 10
6.2 Safety against derailment on twisted track 10
6.3 Safety against derailment under longitudinal compressive forces in S-shaped curves 12
6.4 Evaluation of the torsional coefficient of a car body 12
6.5 Determination of displacement characteristics 12
6.6 Loading of the diverging branch of a switch 13
6.7 Running safety in curved crossings for vehicles with small wheels 14

7 Statistical analysis and multiple regression 14
7.1 Background 14
7.2 Relationship of assessment parameters and input variables 14
7.3 Assessment methods 16
7.4 Assessment by statistical methods in EN 14363 16
7.4.1 General 16
7.4.2 One-dimensional method 16
7.4.3 Two-dimensional method 24
7.4.4 Multiple regression 28
7.5 Regression assumptions 31

8 Recalculation of Y/Q (7.6.2.2.5) 32
8.1 What was changed 32
8.2 Why was it changed 33
8.3 Any references to useful background 33
8.4 What were the options, what was rejected and why? 33

9 Track loading parameters 36

10 Rail surface damage quantity Tqst 36
10.1 What was changed 36
10.2 Why was it changed 36
10.3 Approach 37

10.4 Derivation and definition of Tqst ... 38

CEN/TR 17039:2017 (E) 10.5 Measurable quantities ... 39
10.6 Limit values ... 39
10.7 Verification from tests ... 40

11 Replacing of limit values of ride characteristics by informative guidance for assessment 40
11.1 General ... 40
11.2 Removing limit values for quasi-static lateral acceleration ... 41
11.3 Revision of accelerometer positions in the car body of freight vehicles ... 42

12 Track geometric quality and coordination with WG 28 ... 42
12.1 Background ... 42
12.2 Joint Survey Group WG 10 / WG 28 ... 44
12.3 DynoTRAIN project ... 45
12.4 Use of 50 % and / or 90 % levels ... 45
12.5 Changes from EN 14363:2005 and UIC 518:2009 ... 45
12.6 Speed range used for Track Quality assessment ... 46
12.7 Wavelength Ranges ... 46
12.8 Requirements in different zones ... 47
12.9 Topics discussed but not changed ... 47

13 Contact conditions ... 47
13.1 Equivalent conicity ... 47
13.1.1 Summary of requirements of EN°14363:2005 ... 47
13.1.2 Summary of requirements of UIC Leaflet 518:2009 ... 48
13.1.3 Changes in EN 14363:2016 ... 48
13.2 Background information about investigations carried out in the DynoTRAIN project ... 49
13.3 Radial steering index (RSI) ... 54
13.3.1 Summary of requirements of EN°14363:2005 ... 54
13.3.2 Summary of requirements of UIC Leaflet 518:2009 ... 54
13.3.3 Changes in EN°14363:2016 ... 55
13.3.4 Background information about the radial steering index ... 55

14 Special vehicles ... 58

15 Simulation ... 59
15.1 General ... 59
15.2 Model validation ... 60
15.2.1 Principle of model validation ... 60
15.2.2 Evaluations to carry out model validation ... 60
15.2.3 Independent review ... 61
15.2.4 Validation proposal from DynoTRAIN ... 61
15.2.5 Efficiency of the usage of stationary tests ... 62
15.3 Fields and conditions for application of simulation ... 62
15.3.1 Introduction ... 62
15.3.2 Definitions of reference and modified vehicle ... 62
15.3.3 Scope of permitted modifications ... 63
15.3.4 Requirements regarding the modification of a validated model ... 63
15.3.5 Evaluation of estimated values ... 64
15.3.6 Application field: Extension of the range of test conditions ... 64
15.3.7 Application field: Approval of vehicle modification ... 64
15.3.8 Application field: Approval of new vehicles by comparison with a reference vehicle ... 65
15.3.9 Application field: Investigation of dynamic behaviour in case of fault modes ... 65
15.4 Input data for simulation ... 65
15.4.1 Introduction ... 65
15.4.2 Track layout ... 65

CEN/TR 17039:2017 (E) 15.4.3 Track irregularity data ... 66
15.4.4 Frequency / wavelength content ... 66
15.4.5 Requirements for variation in input conditions ... 66

16 Extension of acceptance (Annex U) 66

17 Topics discussed but postponed for future revisions 68
17.1 General 68
17.2 Y/Q 68
17.3 Tqst 68
17.4 Bqst and Bmax 68
17.5 Ya,max 68
17.6 Introduction of high frequency contents to the Q-force limits 68
17.7 Track geometry 69
17.8 Compatibility with track conditions outside the test conditions 69
17.9 WHEEL RAIL Geometric contact conditions 69
17.10 Cyclic top 70
17.11 Over-speed and over Cant deficiency testing 70
17.12 General points 70

18 Influence of the revision of EN 14363 on current TSIs 71
18.1 General 71
18.2 Letter to ERA 71
18.3 Annex 1 to letter to ERA 71

Annex A (informative) Guideline for presentation of results from multiple regression 76

A.1 Introduction and purpose 76
A.2 Principles 76
A.3 Example 77
