# DIN EN 13979-1:2020-09 (E)

## Railway applications - Wheelsets and bogies - Monobloc wheels - Technical ap proval procedure - Part 1: Forged and rolled wheels

## Contents

Page

European foreword ..... 5

Introduction ..... 6

1 Scope ..... 7

2 Normative references ..... 7

3 Terms and definitions ..... 7

4 Parameters for the definition of the application covered ..... 8
4.1 General ..... 8
4.2 Geometric parameters for interchangeability ..... 8
4.2.1 General ..... 8
4.2.2 Functional requirements ..... 8
4.2.3 Assembly requirements ..... 9
4.2.4 Maintenance requirements ..... 9
4.3 Parameters for thermomechanical assessment of tread-braked wheels ..... 9
4.3.1 Drag braking or consecutive stop braking ..... 9
4.3.2 Accidental drag braking incident ..... 10
4.4 Mechanical assessment parameters ..... 10
4.5 Acoustic assessment parameters ..... 11

5 Description of the wheel, the design of which shall be assessed ..... 11

6 Assessment of geometric interchangeability ..... 11

7 Assessment of thermomechanical behaviour ..... 11
7.1 General procedure ..... 11
7.2 First stage - Braking bench test ..... 12
7.2.1 Test procedure ..... 12
7.2.2 Decision criteria ..... 12
7.3 Second stage - Wheel fracture bench test ..... 13
7.3.1 General ..... 13
7.3.2 Test procedure ..... 13
7.3.3 Decision criterion ..... 13
7.4 Third stage - Field braking test ..... 13
7.4.1 General ..... 13
7.4.2 Test procedure ..... 13
7.4.3 Decision criteria ..... 13

8 Assessment of mechanical behaviour ..... 14
8.1 General procedure ..... 14
8.2 First stage - Calculation ..... 14
8.2.1 Applied forces ..... 14
8.2.2 Calculation procedure ..... 16
8.2.3 Decision criteria ..... 16
8.3 Second stage - Bench test ..... 17
8.3.1 General ..... 17
8.3.2 Definition of bench loading and the test procedure ..... 17
8.3.3 Decision criteria ..... 17

9 Assessment of acoustic behaviour ..... 17

10 Technical approval documents ..... 17

Annexe A (informative) Drag braking values ..... 18

A.1 Freight wagons ..... 18
A.2 Other types of rolling stock and specific freight wagons ..... 18

Annexe B (normative) Assessment of thermomechanical behaviour ..... 19

B.1 Assessment flow chart ..... 19
B.2 Braking bench test procedure ..... 20
B.2.1 Test principle ..... 20
B.2.2 Definition of drag braking ..... 20
B.2.3 Method for measuring decision criteria ..... 20
B.2.4 Tests and measurements ..... 21
B.2.5 Anomalies ..... 22
B.3 Wheel fracture bench testing procedure ..... 22
B.3.1 Test principle ..... 22
B.3.2 Creation of residual stresses in the rim of the wheel ..... 22
B.3.3 Pre-cracked rim ..... 22
B.3.4 Definition of drag braking test ..... 24
B.3.5 Parameters for the wheel fracture bench test ..... 24
B.3.6 Tests and measurements ..... 25
B.3.7 Anomalies ..... 26
B.4 Field braking test procedure ..... 26
B.4.1 Test principle ..... 26
B.4.2 Definition of braking ..... 26
B.4.3 Method for measuring decision criteria ..... 27
B.4.4 Route type for testing ..... 27
B.4.5 Tests and measurements ..... 28
B.4.6 Anomalies ..... 29

Annexe C (normative) Wheel profile diameter definition ..... 30

C.1 General ..... 30
C.2 Diameter after last reprofiling ..... 30
C.3 Worn diameter ..... 31

Annexe D (normative) Assessment of mechanical behaviour ..... 32

D.1 Assessment flow chart ..... 32
D.2 Calculation procedure in the case of exceptional load ..... 33
D.2.1 Principle ..... 33
D.2.2 Load ..... 33
D.3 Calculation procedure for cases of fatigue load ..... 33
D.3.1 Principle ..... 33
D.3.2 Load ..... 33
D.3.3 Method of calculation ..... 33

Annexe E (informative) Fatigue loading for narrow gauge tracks (metric or close to a metre) ..... 35

Annexe F (informative) Fatigue loading for tilting trains ..... 36

Annexe G (normative) Mechanical behaviour - Finite element calculation assessment ..... 37

Annexe H (informative) Mechanical behaviour - Bench loading and test procedure ..... 38

H.1 Principle of bench loading and test procedure ..... 38
H.2 Definition of loads ..... 38

H.2.1 General ..... 38
H.2.2 Measurement of stresses during field tests ..... 38
H.3 Fatigue bench test ..... 39
H.3.1 Method 1 - Random fatigue test ..... 39
H.3.2 Method 2 - Single-stage fatigue test ..... 40
H.3.3 Examples of benches ..... 41

Annexe I (informative) Assessment of acoustic behaviour ..... 42

I.1 General procedure ..... 42
I.2 Assessment procedure ..... 42
I.3 Assessment criteria ..... 43
I.4 Decision criterion ..... 43
I.5 Assessment flow chart ..... 44
I.5.1 Preliminary comment ..... 44
I.5.2 Calculating the wheel modal basis ..... 45
I.5.3 Defining the reference speeds ..... 45
I.5.4 Defining the reference combined wheel-rail roughness ..... 45
I.5.5 Defining the reference track model ..... 46
I.5.6 Defining the calculation parameters ..... 47
I.5.7 Calculating sound power ..... 48
I.5.8 Factoring the weighted spectrum into sound power ..... 48
I.5.9 Calculating the acceptance criterion ..... 49
I.5.10 Optional calculations ..... 49
I.6 Field measurement procedure ..... 50
I.6.1 General ..... 50
I.6.2 Environmental conditions ..... 50
I.6.3 Conditions for the track ..... 50
I.6.4 Conditions for the train ..... 50
I.6.5 Positioning the measurement points ..... 51
I.6.6 Measurement quantities ..... 52
I.6.7 Test procedure ..... 52
I.6.8 Data processing ..... 53

Annexe J (informative) Ultrasonic method for determining residual stresses in the rim (non-destructive method) ..... 55

J.1 Procedure ..... 55
J.2 Measurement uncertainty ..... 55
J.3 Calibrations ..... 56
J.4 Verifying measurement parameters ..... 56

Annexe ZA (informative) Relationship between this European Standard and the relevant essential requirements of EU Directive 2008/57/EC which it aims to cover ..... 57

Bibliography ..... 61
