European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 7

4 Principles 7
4.1 Product assessment for toxicity 7
4.1.1 General principles 7
4.1.2 Method 1: Smoke Chamber 8
4.1.3 Method 2: Tube Furnace 8
4.2 Analysis of fire effluents 8

5 Method 1 - Smoke chamber 9
5.1 Gas sampling test apparatus 9
5.2 Calibration 12
5.2.1 General calibrations 12
5.2.2 Chamber leakage test 12
5.2.3 Gas analyser calibration 12
5.3 Test environment 13
5.4 Conditioning of samples 13
5.5 Test specimen preparation 13
5.6 Gas testing 13
5.6.1 Pre-test conditions 13
5.6.2 Testing 13
5.6.3 Operation before each test 14
5.6.4 Operation during a test 14
5.6.5 Operation after each test 15
5.7 Data analysis 16
5.7.1 General 16
5.7.2 Calculation of corrected volume fraction 16
5.7.3 Calculation of time shift 16
5.7.4 Variability of test results 17

6 Method 2 - Tube furnace 17
6.1 Test apparatus 17
6.2 Test environment 17
6.3 Conditioning of samples 17
6.4 Test specimen preparation 17
6.5 Test for gases 17

7 Calculations of CIT 18
7.1 Introduction 18
7.2 Calculation of CITG - Method 1 19
7.3 Calculation of CITNLP - Method 2 20

8 Test report 20

8.1 For all product tests (according to Method 1 or Method 2) 20
8.2 For tests according to Method 1 21
8.3 For tests according to Method 2 22

Annex A (informative) Calculations of FED/FEC 23

A.1 Calculation of FED 23
A.2 Calculation of FEC 23
A.3 Scaling term 24
A.4 Reporting 24

Annex B (informative) Worked Example of Calculation of FED and FEC 25

Annex C (informative) Typical calibration procedure using certified gas cylinder 40

C.1 General 40
C.2 Set up of apparatus 40
C.3 Calibration procedure 41

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 2008/57/EC aimed to be covered 43
