DIN EN 17168:2021-09 (E)

Railway applications - Platform barrier systems

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 7

3 Terms and definitions 9

4 System design requirements 12
4.1 Physical and structural requirements of the platform barrier 12
4.1.1 General structural requirements 12
4.1.2 Structural design principles 13
4.1.3 Structural loading conditions 14
4.1.4 Glazing and other panelling materials in facades, including doors and gates 15
4.1.5 Fire performance - use as a fire barrier 16
4.1.6 Fire performance - fire resistance of materials 16
4.1.7 Requirements for emergency egress doors/gates 16
4.1.8 Requirements for driver access doors/gates 17
4.1.9 Requirements for platform extremity doors/gates 18
4.1.10 Entrapment between the platform barrier and vehicles 19
4.1.11 Environmental requirements 24
4.1.12 Acoustic and thermal properties of platform barriers 25
4.1.13 Physical requirements of doors and gates for normal operation 25
4.2 Control and electrical requirements 28
4.2.1 Control system - conditions for opening/closing of doors/gates 28
4.2.2 Detection of door/gate locking and closure 28
4.2.3 Door/gate status indications 28
4.2.4 Synchronization of vehicle and platform doors/gates 29
4.2.5 Audible and visible alerts 29
4.2.6 Integrity of platform barrier control systems 29
4.2.7 Local control of the doors/gates in a platform barrier system 30
4.2.8 Electrical safety - earthing and bonding arrangements 30

5 Operational requirements 33
5.1 General operational requirements 33
5.1.1 Maintainability 33
5.1.2 Persons with reduced mobility 34
5.1.3 Gauging 34
5.1.4 Tripping hazard at vehicle and platform barrier doorways 34
5.2 Requirements for mechanical gap fillers operating in conjunction with platform barrier systems 35

6 Testing and verification of platform barrier systems 36
6.1 General 36
6.2 Type tests 36
6.3 Routine tests 36
6.4 Functional testing of the platform barrier system 36
6.5 Integration testing of the barriers with other railway subsystems 36

Annex A (normative) Testing plan 38

Annex B (informative) Guidance on structural design 40

Annex C (informative) Principles for earthing and bonding strategies 46

C.1 Factors for consideration 46
C.2 Principle A -- The platform barrier system is bonded to station earth 46
C.3 Principle B -- The platform barrier system is insulated from station earth and also from the traction current return rail (i.e. floating) 47
C.4 Principle C -- The barrier system is bonded to the traction return rail and insulated from station earth 47
C.5 Principle D -- The platform barrier is constructed of non-conductive materials 50

Annex D (informative) System integration 51

D.1 Purpose 51
D.2 Responsibility 51
D.3 Overall targets 51
D.4 Specific considerations 51
D.4.1 Integration with railway control systems and with train operation 51
D.4.2 Control system - conditions for opening/closing of doors/gates 51
D.4.3 Accuracy of stopping 53
D.4.4 Alignment 53
D.4.5 Visibility of platform-train interface 53
D.4.6 Other physical considerations 54

Annex E (informative) Guidance on aerodynamic loading from trains 55

E.1 Introduction 55
E.2 Technical basis and method 55
E.3 Calculation of equivalent pressures 56

Bibliography 58
