

DIN EN 14067-6:2022-09 (E)

Railway applications - Aerodynamics - Part 6: Requirements and test procedures for cross wind assessment (includes Amendment A1:2022)

| Contents | Page |
|--|------|
| European foreword | 6 |
| Introduction | 7 |
| 1 Scope | 8 |
| 2 Normative references | 8 |
| 3 Terms and definitions | 8 |
| 4 Symbols and abbreviations | 9 |
| 5 Methods and requirements to assess cross wind stability of vehicles | 22 |
| 5.1 General | 22 |
| 5.2 Applicability of cross wind methodologies for rolling stock assessment purposes | 23 |
| 5.3 Determination of aerodynamic coefficients | 25 |
| 5.3.1 General | 25 |
| 5.3.2 Predictive formula | 25 |
| 5.3.3 Simulations by Computational Fluid Dynamics (CFD) | 26 |
| 5.3.4 Reduced-scale wind tunnel measurements | 29 |
| 5.4 Determination of wheel unloading due to cross winds | 34 |
| 5.4.1 General | 34 |
| 5.4.2 Simple method | 34 |
| 5.4.3 Advanced quasi-static method | 37 |
| 5.4.4 Time-dependent MBS method using a Chinese hat wind scenario | 40 |
| 5.5 Presentation form of characteristic wind curves (CWCs) | 47 |
| 5.5.1 General | 47 |
| 5.5.2 CWC presentation form for passenger vehicles and locomotives | 48 |
| 5.5.3 CWC presentation form for freight wagons | 49 |
| 5.6 Requirements | 50 |
| 5.6.1 Requirements for passenger vehicles and locomotives running at 250 km/h vmax 360 km/h | 50 |
| 5.6.2 Requirements for passenger vehicles and locomotives running 140 km/h < vmax < 250 km/h | 53 |
| 5.6.3 Requirements for freight wagons | 53 |
| 6 Method to acquire the needed railway line data | 54 |
| 6.1 General | 54 |
| 6.2 Presentation form of railway line data | 54 |
| 6.2.1 General | 54 |
| 6.2.2 Plan profile | 54 |
| 6.2.3 Vertical profile | 55 |
| 6.2.4 Track design speed | 56 |
| 6.2.5 Walls | 57 |
| 6.2.6 Meteorological input data for line description | 57 |
| 6.2.7 Integrated line database | 58 |
| 6.2.8 Required minimum resolution/accuracy | 60 |
| 7 Methods to assess the wind exposure of a railway line | 60 |
| 8 Guidance for the analysis and assessment of the cross wind risk | 61 |

| | | |
|--|---|----|
| 8.1 | General | 61 |
| 8.2 | Infrastructure with train speeds at or above 250 km/h | 61 |
| 8.3 | Infrastructure with train speeds below 250 km/h | 61 |
| 9 | Required documentation | 62 |
| 9.1 | General | 62 |
| 9.2 | Assessment of cross wind stability of passenger vehicles and locomotives | 62 |
| 9.3 | Assessment of cross wind stability of freight vehicles | 62 |
| 9.4 | Acquisition of railway line data | 62 |
| Annex A (informative) Application of methods to assess cross wind stability of vehicles within Europe | | 63 |
| Annex B (informative) Blockage correction | | 67 |
| B.1 | Dynamic pressure method | 67 |
| B.2 | German method | 67 |
| B.3 | UK method | 67 |
| B.4 | Slotted walls | 68 |
| Annex C (normative) Wind tunnel benchmark test data for standard ground configuration | | 69 |
| C.1 | General | 69 |
| C.2 | ICE 3 leading vehicle wind tunnel model | 69 |
| C.3 | TGV Duplex power car wind tunnel model | 70 |
| C.4 | ETR 500 power car wind tunnel model | 71 |
| Annex D (informative) Other ground configurations for wind tunnel testing | | 73 |
| D.1 | Flat ground with gap (TSI HS RST) | 73 |
| D.2 | Double track ballast and rails (TSI HS RST) | 73 |
| D.3 | Standard embankment of 6 m height (TSI HS RST) | 74 |
| D.4 | Flat ground without gap (Finnish method) | 75 |
| D.5 | Double track ballast and rails (UK method) | 75 |
| Annex E (informative) Wind tunnel benchmark test data for other ground configurations | | 77 |
| E.1 | General | 77 |
| E.2 | ICE 3 leading vehicle wind tunnel model | 77 |
| E.3 | TGV Duplex power car wind tunnel model | 81 |
| E.4 | ETR 500 power car wind tunnel model | 86 |
| Annex F (informative) Embankment overspeed effect | | 90 |
| Annex G (informative) Atmospheric boundary layer wind tunnel testing | | 91 |
| G.1 | General | 91 |
| G.2 | Benchmark tests | 91 |
| G.3 | Wind simulation | 92 |
| G.3.1 | Boundary layer profiles | 92 |
| G.3.2 | Turbulence intensities | 92 |
| G.3.3 | Turbulence integral length scale | 93 |
| G.4 | Model scale and blockage requirements | 93 |
| G.5 | Modelling accuracy | 93 |
| G.6 | Instrumentation requirements | 93 |
| G.6.1 | General | 93 |
| G.6.2 | Speed measurement | 93 |
| G.6.3 | Force and moment balance | 94 |
| G.7 | Data acquisition requirements | 94 |
| G.7.1 | General | 94 |
| G.7.2 | Time scale, sampling frequency and acquisition duration | 94 |
| G.7.3 | Measurement of temperature and atmospheric pressure | 95 |

| | | |
|-------|---|------------|
| G.8 | Calculation of mean values | 95 |
| G.9 | Calculation of peak values | 95 |
| G.10 | Calculation of air density | 96 |
| G.11 | Calculation of the uncorrected rolling moment coefficient | 96 |
| G.12 | Determination of the lee rail roll moment coefficient | 97 |
| G.13 | Data interpolation | 97 |
| | Annex H (informative) Five mass model | 98 |
| H.1 | General | 98 |
| H.2 | Derivation of formulae | 100 |
| H.3 | Example calculations | 104 |
| H.3.1 | General | 104 |
| H.3.2 | Example vehicle 1 | 105 |
| H.3.3 | Example vehicle 2 | 108 |
| | Annex I (normative) Mathematical model for the Chinese hat | 113 |
| I.1 | Mathematical model for Chinese hat | 113 |
| I.2 | Example calculation for Chinese hat | 116 |
| | Annex J (informative) Stochastic wind model | 122 |
| J.1 | General | 122 |
| J.2 | Assumptions | 122 |
| J.3 | Application range | 122 |
| J.4 | General Approach | 122 |
| J.4.1 | General | 122 |
| J.4.2 | First step: wind tunnel tests (aerodynamic properties determination) | 123 |
| J.4.3 | Second step: calculation of turbulent wind speed | 123 |
| J.4.4 | Third step: evaluation of aerodynamic forces | 127 |
| J.4.5 | Fourth step: simulation of vehicle dynamics | 128 |
| J.4.6 | Fifth step: evaluation of characteristic wind speed | 128 |
| | Annex K (informative) Stability of passenger vehicles and locomotives against overturning according to national guidelines | 130 |
| K.1 | General | 130 |
| K.2 | According to DB Guideline 80704 (Germany) | 130 |
| K.3 | According to Railway Group Standard GM/RT 2141 (Great Britain) | 132 |
| | Annex L (informative) Information on methods to assess the wind exposure of a railway line | 133 |
| L.1 | General | 133 |
| L.2 | Wind map approaches | 133 |
| L.3 | Transfer approaches | 134 |
| | Annex M (informative) Extended CWCs | 136 |
| | Bibliography | 139 |
