Page

European foreword 4

Introduction 5

1 Scope 9

2 Normative references 9

3 Terms, definitions, symbols and abbreviations 9
3.1 Terms and definitions 9
3.2 Symbols and abbreviations 9

4 Loads 11
4.1 Reliability analysis based on the Stress Strength Interference Analysis method 11
4.2 Fatigue load analysis method 13
4.2.1 General 13
4.2.2 Load signals processing and Fatigue-Equivalent-Load 13
4.2.3 Method to generate the distribution of in-service load severities 19
4.3 Fatigue reliability assessment of a railway passenger coach axle 23
4.3.1 Load measurements 23
4.3.2 Load spectra classification and generation and distribution of load severity 27
4.3.3 Estimation of the probability of a crack initiation 31

5 Modelling 33
5.1 General 33
5.2 Stress concentration factors 33
5.3 Length of the transition 36
5.4 Numerical modelling of axles 38
5.4.1 Development of numerical models and validation 38
5.4.2 Analysis of mounted components 42
5.4.3 Modelling recommendations 43
5.5 Axle calculation method 44

6 Fatigue limits 45
6.1 Testing method principals 45
6.1.1 F1 tests 45
6.1.2 F4 tests 46
6.1.3 Fatigue limit estimation 46
6.2 Test plan 47
6.3 Axle body fatigue limit results 51
6.3.1 F1 standard surface – transitions and groves (EA4T axles) 51
6.3.2 F1 Blasted surface – transitions (EA4T axles) 52
6.3.3 F1 Standard surface – transitions (EA1N axles) 53
6.3.4 F1 Corroded surfaces – transitions of unpainted axles 54
6.4 Axle press-fit seat fatigue limits (F4) 55
6.4.1 Diameter ratio = 1,12 (EA4T axles) 55
6.4.2 Diameter ratio = 1,08 (EA4T) 56

7 Safety factors 57
7.1 Aims and problem statement 57
7.2 Probabilistic fatigue assessment 60
7.2.1 Failure probability under constant amplitude stress 60

7.2.2 Fatigue damage under VA loading 60
7.2.3 Bignonnet method 61
7.3 Input data for probabilistic fatigue assessment of railway axles 62
7.3.1 Definitions of reference S-N diagrams 62
7.3.2 Miner Index at failure 63
7.3.3 Target reliability and failure rate for railway axles 66
7.4 Probabilistic fatigue damage calculations for railway axles 66
7.4.1 Format for the calculations 66
7.4.2 Montecarlo simulations 67
7.4.3 Stress spectra 67
7.5 Results 68
7.5.1 General 68
7.5.2 Safety factor and reliability under constant amplitude stress 69
7.5.3 Safety factor for damage calculations 70
8 Conclusions of Euraxles Project 71
9 Recommendations of CEN TC256/SC2/WG11 75
Annex A (informative) Application example of the axle calculation method 76
A.1 General 76
A.2 General descriptions 76
A.3 Load distribution 77
A.4 Results according to EN 13103-1 78
A.5 Design of EURAXLES method 80
A.6 Comparison of results 82
Bibliography 83
