DIN EN 15427-1-1:2022-06 (E)

Railway applications - Wheel/Rail friction management - Part 1-1: Equipment and Application - Flange Lubricants

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 General 7
4.1 Purpose of equipment 7
4.2 Application of lubricant 8

5 Requirements for trainborne equipment 8
5.1 General 8
5.2 Design of trainborne equipment 9
5.3 Installation of trainborne equipment 10
5.4 Operations, inspection and maintenance 10
5.5 Application 10
5.6 Verification 11

6 Requirements for trackside equipment 12
6.1 General 12
6.2 Design of trackside equipment 12
6.3 Installation of trackside equipment 13
6.4 Operations, inspection and maintenance 13
6.5 Application 13
6.6 Verification 15

Annex A (informative) Types of trainborne and trackside equipment 16

A.1 Introduction 16
A.2 Trainborne equipment 16
A.2.1 Fluid lubricant application to the active interface 16
A.2.2 Solid lubricant application to the wheel 16
A.3 Trackside equipment 16
A.3.1 Mechanically activated 16
A.3.2 Hydraulically activated 16
A.3.3 Electrically activated 16

Annex B (informative) Guidance on approvals testing and verification 17

B.1 General 17
B.2 Process for system verification 18
B.2.1 Baselining 18
B.2.2 Approvals testing 18
B.2.3 Measuring effectiveness 18

Annex C (informative) Lubricant product performance - Field assessment 19

C.1 General 19
C.2 Product performance assessment 19
C.3 Monitoring 20
C.4 Outcome of trial 20

Annex D (informative) Guidance on verification and optimization of the application system 21

D.1 General 21
D.2 Trainborne equipment 21
D.3 Trackside equipment 21
D.4 Assessing the lubrication condition of rail or wheel (adhesive tape impression) 22

Annex E (informative) Installation and maintenance good practice for trainborne equipment 25

E.1 Reasons for installing trainborne equipment 25
E.2 Positioning of applicator 25
E.3 Information for maintenance of spray nozzles 27
E.4 Information for maintenance of sticks 28

Annex F (informative) Installation and maintenance good practice for trackside equipment 30

F.1 Selecting locations for trackside equipment 30
F.2 Determination of applicator position 30
F.3 Inspection and maintenance 31
F.4 Records 31
