

DIN EN 15427-2-1:2022-07 (E)

Railway applications - Wheel/Rail friction management - Part 2-1: Properties and Characteristics - Flange lubricants

Contents		Page
European foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	6
4	Design requirements	8
5	Technical specification and product approval	8
5.1	Introduction	8
5.2	Product specification	8
5.3	Technical file	8
6	Control and monitoring of product	9
6.1	Manufacturing process	9
6.2	Composition of lubricant	9
6.3	Routine tests	9
6.4	Additional measures	9
7	Technical datasheet	9
7.1	General	9
7.2	Grease-based lubricant characteristics	9
7.3	Oil-based lubricant characteristics	9
7.4	Solid-based lubricant characteristics	9
8	Packaging, labelling and storage	10
Annex A (normative) Requirements for lubricants and testing		11
Annex B (informative) Water wash-off test		21
Annex C (informative) Corrosion test on steel		23
Annex D (informative) Behaviour at an elevated temperature - adhesion on steel sheet		25
Annex E (informative) Determination of the volatile constituents in greases		27
Annex F (informative) Peak forming and droop		29
Annex G (informative) Functional test on specific equipment		32
Annex H (informative) Solid flange lubricant stick testing and starvation test on twin-disc machine		38
Annex I (informative) Mini Traction Machine creep curve test		44
